Yu,2016-02-03 Advanced Manufacturing and Automation V contains the proceedings of the 5th International Workshop of Advanced Manufacturing and Automation IWAMA 2015 This meeting continues the success of this important international workshop series and disseminates the works of academic and industrial experts from around the world in the areas of advanced manufacturing and automation The disciplines of manufacturing and automation have attained paramount importance and are vital factors for the maintenance and improvement of the economy of a nation and the quality of life Manufacturing and automation are advancing at a rapid pace and new technologies are constantly emerging in the fields The challenges faced by today s engineers are forcing them to keep on top of the emerging trends through continuous research and development The papers comprising these proceedings cover various topics including Robotics and automation Computational intelligence Design and optimization Product life cycle management Integration of CAD CAPP CAM CIMS Advanced manufacturing systems Manufacturing operations management Knowledge based manufacturing Manufacturing quality control and management Sustainable production Diagnosis and prognosis of machines Lean and agile manufacturing Virtual and grid manufacturing Resource and asset management Logistics and supply chain management RFID applications Predictive maintenance Reliability and maintainability in manufacturing Project management Renewable energy development Environment protection Intelligent detection

Subject Guide to Books in Print ,1996 *Principles of Polymer Processing* Zehev Tadmor,Costas G. Gogos,2013-12-02 Thoroughly revised edition of the classic text on polymer processing The Second Edition brings the classic text on polymer processing thoroughly up to date with the latest fundamental developments in polymer processing while retaining the critically acclaimed approach of the First Edition Readers are provided with the complete panorama of polymer processing starting with fundamental concepts through the latest current industry practices and future directions All the chapters have been revised and updated and four new chapters have been added to introduce the latest developments Readers familiar with the First Edition will discover a host of new material including Blend and alloy microstructuring Twin screw based melting and chaotic mixing mechanisms Reactive processing Devolatilization theory

mechanisms and industrial practice Compounding theory and industrial practice The increasingly important role of computational fluid mechanics A systematic approach to machine configuration design The Second Edition expands on the unique approach that distinguishes it from comparative texts Rather than focus on specific processing methods the authors assert that polymers have a similar experience in any processing machine and that these experiences can be described by a set of elementary processing steps that prepare the polymer for any of the shaping methods On the other hand the authors do emphasize the unique features of particular polymer processing methods and machines including the particular elementary step and shaping mechanisms and geometrical solutions Replete with problem sets and a solutions manual for instructors this textbook is recommended for undergraduate and graduate students in chemical engineering and polymer and materials engineering and science It will also prove invaluable for industry professionals as a fundamental polymer processing analysis and synthesis reference
