Gupta,2005 *Thermal Engineering Volume 2* Shiv Kumar,2022-02-05 This highly informative and carefully presented book offers a comprehensive overview of the fundamentals of thermal engineering The book focuses both on the fundamentals and more complex topics such as the basics of thermodynamics Zeroth Law of thermodynamics first law of thermodynamics application of first law of thermodynamics second law of thermodynamics entropy availability and irreversibility properties of pure substance vapor power cycles introduction to working of IC engines air standard cycles gas turbines and jet propulsion thermodynamic property relations and combustion The author has included end of chapter problems and worked examples to augment learning and self testing This book is a useful reference to undergraduate students in the area of mechanical engineering *Environmental Studies and Climate Change* R C Sobti,Sandeep K. Malhotra,Kamal Jaiswal,Sanjeev Puri,2022-12-13 Currently anthropogenic activities have caused unprecedented destruction of the environment at alarming rates leading to undesirable alterations in air land and water The process of environment degradation has been accelerated by industrial processes which result in waste as well as over consumption of natural resources The ecological balance has been disturbed and resources have shrunk All this has resulted in climate change which has emerged as a major concern in the 21st century Changes in the environment are driven by demand for energy water and food to raise the standard of living These are also responsible for climate change with contributions from deforestation and CO₂ emissions from fossil fuels such as coal and petroleum The

present volume discusses some of the main issues regarding environmental degradation and the causes as well as the impact of climate change which is impacting the ecosystem. The effects of various pollutants, causes of climate change, with case studies on geochemistry and glaciers etc. and measures to reduce the impact on biodiversity, health etc. are discussed in detail in its chapters. In a nutshell, this volume discusses in detail the following issues: Anthropogenic and natural factors in environmental degradation; Climate change history, causes and threats to abiotic and biotic systems; Case studies on the impact of climate change and living systems; Mitigation and preparedness for the future.
