

Cancer Survivors at Work: A Generation of Progress

Barbara Hoffman, JD

ABSTRACT Before the 1970s, a substantial percentage of cancer survivors faced blatant employment discrimination with little legal recourse, a paucity of support services, and limited medical options for curative treatment. Since then, survivors have benefited from improvements in cancer treatment, the passage of state and federal antidiscrimination laws, and a sea change in perceptions about living with and beyond cancer. Consequently, cancer survivors now face fewer barriers to employment opportunities. Because millions of cancer survivors, more than ever before, are now working age adults, advocacy efforts should shift from expanding legal protection from cancer-based discrimination to providing resources to help survivors meet their individual employment-related concerns. INTRODUCTION

A generation ago, cancer survivors' quality of life, including employment experiences, differed significantly from today. Fewer than one half of those diagnosed with cancer survived more than five years. Treatments were less precise and more disabling. Myths about cancer prevailed. Consequently, many survivors experienced substantial problems obtaining and retaining employment.¹⁻³

Significant medical, social, and legal progress has extended and enhanced the lives of millions of cancer survivors. Advances in cancer treatment fostered changes in attitudes about cancer. Attitudinal changes about cancer, as well as about other serious and chronic medical conditions, provided support for legislation to expand employment opportunities for persons with actual or perceived disabilities. As a result, cancer survivors now seldom face blatant employment discrimination. Instead, survivors now work in more tolerant and compassionate environments where, armed with knowledge about their medical needs and legal rights, they often can minimize the effect of cancer on their careers.

This article will review how the lives of cancer survivors at work have changed over the past generation. It will also discuss how survivors can preserve their legal and social gains and protect their rights to equal employment opportunities.

CANCER SURVIVORSHIP: MYTHS AND FACTS

In the 1970s, a cancer diagnosis was often construed as a death sentence.^{4,5} Most individuals, the media, governments, and survivors commonly referred to themselves as cancer victims.¹⁻³ To employers and insurers, a cancer diagnosis meant potential lost profits and productivity.³ A cancer survivor was the spouse who was left behind to cope alone with unpaid bills and unfulfilled dreams. A cancer diagnosis was seldom discussed publicly.¹⁻³ Many feared cancer to be contagious.¹⁻⁴ Physicians expected survivors to be satisfied with achieving medical remission; few considered or responded constructively to psychosocial sequelae, such as the impact of cancer on work.⁵ The five-year survival rate for the top 15 cancers as identified in SEER data from 1975 to 1979 was only 42.7% for men and 56.6% for women.⁶

A generation of medical progress has brought a sea change in opinions about cancer. The five-year survival rate for the top 15 cancers from 1995 to 2000 improved to 64% for men and to 64.3% for women.⁶ Cancer is no longer considered a death sentence. More than 87% of 957 respondents to a national survey taken in 2002 recognized as false the statement:

an essential reading for all return to work and stay at work stakeholders *Issues of Cancer Survivorship* Debra Kantor, 2015-08-10 *Issues of Cancer Survivorship* addresses the issues of experiencing life with cancer from diagnosis to living with and beyond cancer It focuses on the psychological impact of cancer including psychological distress the uncertainty the short term and long term side effects of treatments body image issues spirituality religious issues impact of the disease on finances impact on family relationships and social support In addition the book covers cancer in children and secondary cancers as a result of the treatment they received which is increasingly an issue as patients are living longer

Health Services for Cancer Survivors Michael Feuerstein, Patricia A. Ganz, 2011-06-15 Health has been conceptualized by world and national health organizations WHO CDC Healthy People 2010 as more than the absence of disease It involves a focus on physical psychosocial and functional aspects of life as well as the prevention of future illnesses At this point in the development of quality health care for cancer survivors there is sufficient knowledge and expert opinion to push efforts forward to improve the health of cancer survivors Clearly there is more research in the most prevalent forms of cancers e g breast cancer than others that provide us with guidance on how to optimize their health but there are data on other forms of cancers that can also better inform practice There may also be general care practices that can cut across cancer types There has been an emergence of epidemiological and clinical research in cancer survivors that can form the basis for a revolution in the quality and nature of health care that survivors receive This book not only provides the reader with diverse perspectives and data but also integrates this information so it can serve as the foundation necessary to improve and maintain the health of cancer survivors Reporting of symptoms to health care providers is a complex multi determined problem influenced not only by the pathophysiology but also as we have learned over the years through pain research by societal cultural and biobehavioral factors This book will consider this important aspect of follow up for millions of cancer survivors because of the strong reliance on symptom reporting for clinical decision making In order for us to generate meaningful and effective treatment we need to better understand the symptom experience in cancer survivors This book provides much information that will assist us to better understand and manage this complicated end point The presenting problems need to be articulated and conceptualized as clearly as possible by both parties so appropriate actions can be taken Since health care costs are a major concern for patients payers and providers this area will also be addressed in all the relevant sections In taking an interdisciplinary perspective this book illustrates the importance of a team approach to the improvement of health care and associated health well being and functioning in cancer survivors The 17 chapters cover critical topics of which physicians and providers of all types must be aware in order to provide the most comprehensive and responsive care for cancer survivors All of the clinical care chapters include case studies to illustrate the real world application of these approaches in cancer survivors Information about sources of referral both within and outside the traditional health care communities will be provided in tabular form There is no other text that provides both an overview of the problems and their

challenges case illustrations of direct application and the reality of reimbursement for such care The editors hope that there may be no need for the clinician or the survivor to adapt to a new normal if the presenting problems are understood and handled from an interdisciplinary perspective as outlined here
