The Hindu-Arabic Numerals David Eugene Smith, Louis Charles Karpinski, 2022-08-01 DigiCat Publishing presents to you this special edition of *The Hindu Arabic Numerals* by David Eugene Smith Louis Charles Karpinski DigiCat Publishing considers every written word to be a legacy of humankind Every DigiCat book has been carefully reproduced for republishing in a new modern format The books are available in print as well as ebooks DigiCat hopes you will treat this work with the acknowledgment and passion it deserves as a classic of world literature **The Hindu-arabic Numerals** David Eugene Smith, 2017-07-06 PREFACE So familiar are we with the numerals that bear the misleading name of Arabic and so extensive is their use in Europe and the Americas that it is difficult for us to realize that their general acceptance in the transactions of commerce is a matter of only the last four centuries and that they are unknown to a very large part of the human race to day It seems strange that such a labor saving device should have struggled for nearly a thousand years after its system of place value was perfected before it replaced such crude notations as the one that the Roman conqueror made substantially universal in Europe Such however is the case and there is probably no one who has not at least some slight passing interest in the story of this struggle To the mathematician and the student of civilization the interest is generally a deep one to the teacher of the elements of knowledge the interest may be less marked but nevertheless it is real and even the business man who makes daily use of the curious symbols by which we express the numbers of commerce cannot fail to have some appreciation for the story of the rise and progress of these tools of his trade This story has often been told in part but it is a long time since any effort has been made to bring together the fragmentary narrations and to set forth the general problem of the origin and development of these numerals In this little work we have attempted to state the history of these forms in small compass to place before the student materials for the investigation of the problems involved and to express as clearly as possible the results of the labors of scholars who have studied the subject in different parts of the world We have had no theory to exploit for the history of mathematics has seen too much of this tendency already but as far as possible we have weighed the testimony and have set forth what seem to be the reasonable conclusions from the evidence at hand To facilitate the work of students an index has been prepared which we hope may be serviceable In this the names of authors appear only when some use has been made of their opinions or when their works are first mentioned in full in a footnote If this work shall

show more clearly the value of our number system and shall make the study of mathematics seem more real to the teacher and student and shall offer material for interesting some pupil more fully in his work with numbers the authors will feel that the considerable labor involved in its preparation has not been in vain We desire to acknowledge our especial indebtedness to Professor Alexander Ziwet for reading all the proof as well as for the digest of a Russian work to Professor Clarence L Meader for Sanskrit transliterations and to Mr Steven T Byington for Arabic transliterations and the scheme of pronunciation of Oriental names and also our indebtedness to other scholars in Oriental learning for information

It has long been recognized that the common numerals used in daily life are of comparatively recent origin The number of systems of notation employed before the Christian era was about the same as the number of written languages and in some cases a single language had several systems The Egyptians for example had three systems of writing with a numerical notation for each the Greeks had two well defined sets of numerals and the Roman symbols for number changed more or less from century to century Even to day the number

The Hindu-Arabic Numerals David Eugene Smith,2012-08-01 Unlike some other reproductions of classic texts 1 We have not used OCR Optical Character Recognition as this leads to bad quality books with introduced typos 2 In books where there are images such as portraits maps sketches etc We have endeavoured to keep the quality of these images so they represent accurately the original artefact Although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy
