Restoration of Wetland Ecosystem: A Trajectory Towards a Sustainable Environment Atul Kumar Upadhyay, Ranjan Singh, D. P. Singh, 2019-06-29 The risks and consequences of environmental change are increasing leading to massive losses in terms of ecosystems and having a huge impact on human populations As such global thinkers environmentalists scientists and policy makers are focusing on finding solutions and ways to sustain life on Earth Anthropogenic impacts on the climate system can only be mitigated by the restoration of existing natural resources and the sustainable development of the environment and society This book discusses the potential of green technology in waste management wetland restoration presenting the latest developments in the field of bioenergy green ecology bioremediation and microbial management Wetlands are one of Earth's most important ecosystems and they provide valuable services to human societies such as minimizing the impacts of floods acting as a carbon sink and offering water purification as well as recreational opportunities Wetlands may be natural or constructed and the effectiveness of wetland services largely depends on the diversity of macrophytes affecting the algal production plant biomass and nutrient status of the system In addition they are one of the richest microbial ecosystems on earth the rhizosphere soil and water interface enhances wetland services with implications ranging from phytoremediation to microbial bioprospection However in order to function properly they need to be effectively redesigned reengineered protected and maintained The book addresses the dynamic relation between three global concerns environmental pollution resource exploitation and

Wetlands James Fargo Balliett, 2010 This volume provides a fresh look at critical environmental issues at they pertain to the world s wetlands from an international viewpoint The goal of this book is to explore how human population growth and behavior have changed the world s wetlands especially in negative ways and how modern society has responded to the challenges these changes present often through increased educational efforts better conservation and management of the environment The first part of this work provides background information how the wetlands ecosystems formed the relative size and locations of the world s wetlands key animal and plant species that live in the wetlands and how the health of the wetlands affects our planet s environment as a whole The second part contains in depth chapters examining seven different geographically diverse locations An overview of each area details its unique features including geology weather conditions and endemic species The text also examines the health of the natural environment and discusses the local human population Short and long term environmental impacts are assessed and regional and international efforts to address interrelated social economic and environmental issues are presented in detail The third part of this book studies how the cumulative levels of pollution and aggressive resource consumption affect the wetlands on a global scale It provides readers with examples of local and regional ecological impacts as responses to these problems Sometimes these unique efforts have resulted in a balance between resource conservation and consumption

Malcolm Lillie, Stephen Ellis, Helen Fenwick, 2007 For the past thirty years or so wetlands have been at the forefront of developments in understanding past cultural activity and associated landscapes Waterlogged environments and contexts not only preserve the organic part of the cultural record but they also provide an archive of the environmental conditions pertaining at the time the deposits form thereby allowing the detailed reconstruction of their associated environments and landscapes

Wetland Management R. A. Falconer, P. Goodwin, 1994 In recent years there has been growing concern about the management of wetlands particularly in the USA and increasingly in Europe These wetlands ranging from a small harbour such as Christchurch in the UK to the large mangrove swamps of Malaysia are natural resources which require comprehensive management Whilst considerable research has been undertaken and documented on the management of wetland ecosystems little emphasis has been focused on the geomorphic hydraulic and hydrologic behaviour of wetlands and the consequent implications for practical management solutions
