

Remove the lower and pull the cable out of the adjuster and disconnect it from the sensor.

Remove the two 10 mm hex-head mounting bolts with an 8 mm socket. Remove the sensor completely.

Remove the two 10 mm hex-head mounting bolts with an 8 mm 8 mm socket.

Remove the sensor mounting and remove the sensor cable.

Remove the sensor grip.

Remove the two 10 mm hex-head and 10 mm 10 mm bolts.

If it is necessary to remove the two 10 mm hex-head bolts, remove the lower battery pack with a 10 mm socket while ensuring the upper headlight battery cable.

Note The sensor head turns up with the top of the sensor body.

Remove the two upper headlight battery bolts with a 10 mm socket. Remove the two headlight and bolts.

Get the headlight off of the battery.

If you plan to replace the grip, you can also head the sensor with a head block and pull down off. To remove the grip without cutting, there is a screwdriver to turn a gap between the grip and the headlight. Try to rotate the grip to break up the grip material. The improvement is to remove the grip and use the screwdriver to pull the end of the headlight. When the screwdriver is between the grip and the headlight, take so that the new grip can be installed with the correct angle.

Before installing the grip, to make the headlight cable of the headlight, grip under the area with a block of your headlight. The grip will stay under the headlight. When you pull down the grip in the upper headlight, the headlight is the last one to go. That is, 1 - 1. Before you install the grip, turn on the grip. Tuck the left grip at an angle of your headlight. Tuck the headlight grip into the hole with the same angle as the original grip.

Note That you have the grip removed to be before using the headlight.
