Thinking About Architecture An Introduction To Architectural Theory:

Thinking about Architecture Colin Davies, 2011-10-17 In order to understand architecture in all its cultural complexity it is necessary to grasp such basic concepts as representation form and space The aim of this book is to provide teachers students practising architects and general readers with a set of ideas that will enrich their conversation their writing and above all their thinking about architecture The book is divided into eight chapters each covering a particular aspect of architecture and introduces difficult concepts gradually Architectural theorists and philosophers are mentioned in passing and their works are listed in the bibliography but they are not the subject of the book Architecture rather than philosophy is at the centre of the picture The aim is to enable the reader to understand architecture in all its aspects rather than to learn the names of particular theorists Written in a conversational style Thinking about Architecture is an invaluable and accessible standard introduction to architectural theory *An Introduction to Architectural Theory* Harry Francis Mallgrave, David J. Goodman, 2011-03-16 A sharp and lively text that covers issues in depth but not to the point that they become inaccessible to beginning students An Introduction to Architectural Theory is the first narrative history of this period charting the veritable revolution in architectural thinking that has taken place as well as the implications of this intellectual upheaval The first comprehensive and critical history of architectural theory over the last fifty years surveys the intellectual history of architecture since 1968 including criticisms of high modernism the rise of postmodern and poststructural theory critical regionalism and tectonics Offers a comprehensive overview of the significant changes that architectural thinking has undergone in the past fifteen years Includes an analysis of where architecture stands and where it will likely move in the coming years *Thinking Architecturally* Paul Righini, 2000 Through a critical study of issues such as order form space style place making aesthetics and architectural theory students are encouraged to think about their own creative ideas The use of analytical reasoning lateral thinking drawing and modelling is emphasised **Building Ideas** Jonathan A. Hale, 2000-08-01 Building Ideas An Introduction to Architectural Theory This book is an essential text for students of architecture and related disciplines satisfying the demand for an accessible introduction to the major theoretical debates in contemporary architecture Written in a lucid and user friendly style the book also acts as a guide and companion volume to the many primary theoretical texts recently made available in reprinted collections Whilst architectural monographs collections of building precedents and polemical manifestoes are growing more and more numerous Building Ideas is the first book to provide an introduction to such a broad range of issues in architectural theory This text therefore serves to fill a widening gap between the everyday practice of architecture and the often bewildering field of academic theoretical debate Beginning with a general introduction to the field of architectural theory covering the interface between philosophy and technology in the production and interpretation of buildings the book presents the major theoretical positions in contemporary architecture through a series of thematically structured chapters Each chapter deals with a specific approach to the theory and criticism

of architecture by presenting a series of related buildings as illustrations of a key theoretical position as well as setting this position in a cultural and historical context Under the five broad headings of Architecture as Engineering The Technological Revolution Architecture as Art Aesthetics in Philosophy The Return of the Body Phenomenology in Architecture Systems of Communication Structuralism and Semiotics and Politics and Architecture The Marxist Tradition the book presents a wide but critical survey of the central questions in the current theoretical debate Providing the theoretical tools necessary for an understanding of the history of philosophies and technologies in architecture this book is essential reading for undergraduate architectural theory courses as well as a first point of reference for anyone wishing to understand the complex connections between architecture and related fields of cultural enquiry Restructuring Architectural Theory Marco Diani, Catherine Ingraham, 1988 Restructuring Architectural Theory addresses the impact of contemporary critical theory from poststructuralism to deconstruction and beyond on architecture This unique collection of essays will be invaluable to students and scholars as well as to architects and art historians for the range of issues it covers and the depth of analysis it provides Tools for Ideas Christian Gänschert, 2012-10-11 Architects today must position themselves within an extremely wide ranging field of qualifications This makes it all the more important to have a fresh introduction to the field that makes up one of their core competences the field of design This introductory presentation describes and analyzes the theories strategies and tools of creative design for the purposes of practical work With thoughtfulness and expertise it opens the reader's eyes to the processes that underlie design and demonstrates different ways of communicating about complex design work The first section focuses on the much discussed relationship between design and research between architecture and the sciences The second section describes basic design approaches from Vitruvius and Alberti through Erwin Panofsky and Wolfgang Kemp to Otl Aicher and Vilém Flusser The third and largest section presents the elementary tools of design from gestures and words through drawings models and simulations to critique all as instruments of creative design in architecture and its related fields **Introduction to Architecture** Joseph Godlewski, 2018-08-08 Introduction to Architecture Global Disciplinary Knowledge provides students with a holistic exploration of the history of architectural discourse The anthology features select readings in architectural theory which are supplemented by clear introductory remarks to help guide students through critical concepts and themes The book expands the repertoire of traditional Euro American based theory anthologies by presenting texts from an explicitly global perspective It engages a diverse range of debates on the built environment throughout history and around the world The collection addresses the what how and why of architecture and architectural theory specifically addressing the following questions What is architecture What are the ideas behind some of the most significant buildings in history How does architecture manifest cultural values and aspirations in different contexts Why is all of this important in the first place To answer these questions the anthology offers students readings on architectural thought and theory from some of the most renowned and revered architects and theorists of their time The text also provides

students with case studies and images of exemplary buildings to help them connect the dots between theoretical concepts and constructed works of architecture Designed to serve as a supplementary text Introduction to Architecture is a cross disciplinary anthology well suited for foundational courses in architectural history architecture theory of architecture cultural studies anthropology and urban studies An architectural theorist historian and practitioner Joseph Godlewski earned Ph D and M S degrees in architectural history and theory from the University of California Berkeley He is an assistant professor at the Syracuse University School of Architecture where he teaches courses in theory and design His writing has been featured in various forums including CLOG The Plan Journal MONU ArchDaily com Traditional Dwellings and Settlements Review and the book The Dissertation An Architecture Student s Handbook He s a member of the Global Architectural History Teaching Collaborative GAHTC

Analogical Thinking in Architecture Jean-Pierre Chupin, 2025-03-20 Since the turn of the 21st century design thinking has permeated many fields outside of the design disciplines It is expected to succeed whenever disciplinary boundaries need to be transcended and it is imperative when thinking outside the box This book argues that these qualities have long been supported by analogical thinking an agile way of reasoning in which symbolic connections allow designers to address the complexities of the design process An active field in cognitive sciences artificial intelligence psychology and philosophy analogical thinking has yet to be theorized within the built environment Analogical Thinking in Architecture looks at how this approach offers an agile way to respond to the heterogeneous and often contradictory value systems prevalent in architectural design The book is organized into four case studies the first reviews analogies in current models of design thinking the second surveys the revivals of biological analogies from the 19th to the 21st century the third probes cult architect Aldo Rossi s theory of the Città Analoga Analogous City while the fourth uncovers the role of analogies in critical and theoretical writing Offering a reappraisal of theories on the role of analogical thinking by prominent architects including Rossi Peter Eisenman and Frederick Kiesler historians Peter Colins and Philip Steadman and theoreticians Geoffrey Broadbent Colin Rowe Peter G Rowe Chris Abel and Donald A Sch n the book provides both a comprehensive introduction to the concept of analogical thinking in architecture and the first theorization of analogy specifically within the field of the built environment

Forty Ways to Think About Architecture Iain Borden, Murray Fraser, Barbara Penner, 2014-08-11 How do we think about architecture historically and theoretically Forty Ways to Think about Architecture provides an introduction to some of the wide ranging ways in which architectural history and theory are being approached today The inspiration for this project is the work of Adrian Forty Professor of Architectural History at the Bartlett School of Architecture University College London UCL who has been internationally renowned as the UK s leading academic in the discipline for 40 years Forty s many publications notably *Objects of Desire* 1986 *Words and Buildings* 2000 and *Concrete and Culture* 2012 have been crucial to opening up new approaches to architectural history and theory and have helped to establish entirely new areas of study His teaching at The Bartlett has enthused a new generation about the exciting possibilities of architectural history and theory as

a field This collection takes in a total of 40 essays covering key subjects ranging from memory and heritage to everyday life building materials and city spaces As well as critical theory philosophy literature and experimental design it refers to more immediate and topical issues in the built environment such as globalisation localism regeneration and ecologies Concise and engaging entries reflect on architecture from a range of perspectives Contributors include eminent historians and theorists from elsewhere such as Jean Louis Cohen Briony Fer Hilde Heynen Mary McLeod Griselda Pollock Penny Sparke and Anthony Vidler as well as Forty's colleagues from the Bartlett School of Architecture including Iain Borden Murray Fraser Peter Hall Barbara Penner Jane Rendell and Andrew Saint Forty Ways to Think about Architecture also features contributions from distinguished architects such as Tony Fretton Jeremy Till and Sarah Wigglesworth and well known critics and architectural writers such as Tom Dyckhoff William Menking and Thomas Weaver Many of the contributors are former students of Adrian Forty Through these diverse essays readers are encouraged to think about how architectural history and theory relates to their own research and design practices thus using the work of Adrian Forty as a catalyst for fresh and innovative thinking about architecture as a subject

The Architect's Brain Harry Francis Mallgrave,2011-05-25 The Architect's Brain Neuroscience Creativity and Architecture is the first book to consider the relationship between the neurosciences and architecture offering a compelling and provocative study in the field of architectural theory Explores various moments of architectural thought over the last 500 years as a cognitive manifestation of philosophical psychological and physiological theory Looks at architectural thought through the lens of the remarkable insights of contemporary neuroscience particularly as they have advanced within the last decade Demonstrates the neurological justification for some very timeless architectural ideas from the multisensory nature of

the architectural experience to the essential relationship of ambiguity and metaphor to creative thinking

Latour for Architects Albena Yaneva, 2022-03-30 Bruno Latour is one of the leading figures in Social Sciences today but his contributions are also widely recognised in the arts His theories flourished in the 1980s in the aftermath of the structuralism wave and generated new concepts and methodologies for the understanding of the social In the past decade Latour and his Actor Network Theory ANT have gained popularity among researchers in the field of architecture Latour for Architects is the first introduction to the key concepts and ideas of Bruno Latour that are relevant to architects First the book discusses critically how specific methods and insights from his philosophy can inspire new thinking in architecture and design pedagogy Second it explores examples from architectural practice and urban design and reviews recent attempts to extend the methods of ANT into the fields of architectural and urban studies Third the book advocates an ANT inspired approach to architecture and examines how its methodological insights can trace new research avenues in the field reflecting meticulously on its epistemological offerings Drawing on many lively examples from the world of architectural practice the book makes a compelling argument about the agency of architectural design and the role architects can play in re ordering the world we live in Following Latour s philosophy offers a new way to handle all the objects of human and nonhuman collective life to re examine the role of matter in design practice and to redefine the forms of social political and ethical associations that bind us together in cities

Situate, Manipulate, Fabricate Chad Schwartz, 2020-08-25 This anthology of selected works outlines three critical instigators of architecture all tied directly to the tectonic makeup of our built environment place material and assembly These catalysts provide the organizational framework for a collection of essays discussing their significant influence on the processes of architectural design and construction With content from a diverse collection of notable architects historians and scholars this book serves as a theoretical structure for understanding the tectonic potential of architecture Each chapter is thematically driven consisting of a pair of essays preceded by an introduction highlighting the fundamental issues at hand and comparing and contrasting the points of view presented Situate Manipulate Fabricate offers an opportunity to explore the essential topics that affect the design and construction as well as the experiential qualities of our built environment

The Figure of Knowledge Sebastiaan Loosen, Rajesh Heynickx, Hilde Heynen, 2020-10-01 It is a major challenge to write the history of post WWII architectural theory without boiling it down to a few defining paradigms An impressive anthologising effort during the 1990s charted architectural theory mostly via the various theoretical frameworks employed such as critical theory critical regionalism deconstructivism and pragmatism Yet the intellectual contours of what constitutes architectural theory have been constantly in flux It is therefore paramount to ask what kind of knowledge has become important in the recent history of architectural theory and how the resulting figure of knowledge sets the conditions for the actual arguments made The contributions in this volume focus on institutional geographical rhetorical and other conditioning factors They thus screen the unspoken rules of engagement that postwar

architectural theory ascribed to **Architecture and Objects** Graham Harman, 2022-07-26 Thinking through object oriented ontology and the work of architects such as Rem Koolhaas and Zaha Hadid to explore new concepts of the relationship between form and function Object oriented ontology has become increasingly popular among architectural theorists and practitioners in recent years Architecture and Objects the first book on architecture by the founder of object oriented ontology OOO deepens the exchange between architecture and philosophy providing a new roadmap to OOO s influence on the language and practice of contemporary architecture and offering new conceptions of the relationship between form and function Graham Harman opens with a critique of Heidegger Derrida and Deleuze the three philosophers whose ideas have left the deepest imprint on the field highlighting the limits of their thinking for architecture Instead Harman contends architecture can employ OOO to reconsider traditional notions of form and function that emphasize their relational characteristics form with a building s visual style function with its stated purpose and constrain architecture s possibilities through literalism Harman challenges these understandings by proposing de relationalized versions of both zero form and zero function that together provide a convincing rejoinder to Immanuel Kant s dismissal of architecture as impure Through critical engagement with the writings of Peter Eisenman and fresh assessments of buildings by Rem Koolhaas Frank Gehry and Zaha Hadid Architecture and Objects forwards a bold vision of architecture Overcoming the difficult task of zeroing function Harman concludes would place architecture at the forefront of a necessary revitalization of exhausted aesthetic paradigms
