Thirty Three Miniatures Mathematical And Algorithmic Applications Of Linear Algebra Student Mathematical Library:

Thirty-three Miniatures Jiří Matoušek, 2010 This book presents interesting problems and theorems as a collection of independent intriguing issues These applications of linear algebra are mainly in the areas of combinatorics geometry and algorithms The text can serve as supplementary reading for an undergraduate linear algebra course or as the main text for a special topics course on linear algebraic methods

Thirty-three Miniatures Jiří Matoušek, 2010 This volume contains a collection of clever mathematical applications of linear algebra mainly in combinatorics geometry and algorithms Each chapter covers a single main result with motivation and full proof in at most ten pages and can be read independently of all other chapters with minor exceptions assuming only a modest background in linear algebra The topics include a number of well known mathematical gems such as Hamming codes the matrix tree theorem the Lovasz bound on the Shannon capacity and a counterexample to Borsuk's conjecture as well as other perhaps less popular but similarly beautiful results e g fast associativity testing a lemma of Steinitz on ordering vectors a monotonicity result for integer partitions or a bound for set pairs via exterior products The simpler results in the first part of the book provide ample material to liven up an undergraduate course of linear algebra The more advanced parts can be used for a graduate course of linear algebraic methods or for seminar presentations

Challenges and Strategies in Teaching Linear Algebra Sepideh Stewart, Christine Andrews-Larson, Avi Berman, Michelle Zandieh, 2018-02-01 This book originated from a Discussion Group Teaching Linear Algebra that was held at the 13th International Conference on Mathematics Education ICME 13 The aim was to consider and highlight current efforts regarding research and instruction on teaching and learning linear algebra from around the world and to spark new collaborations As the outcome of the two day discussion at ICME 13 this book focuses on the pedagogy of linear algebra with a particular emphasis on tasks that are productive for learning The main themes addressed include theoretical perspectives on the teaching and learning of linear algebra empirical analyses related to learning particular content in linear algebra the use of technology and dynamic geometry software and pedagogical

discussions of challenging linear algebra tasks Drawing on the expertise of mathematics education researchers and research mathematicians with experience in teaching linear algebra this book gathers work from nine countries Austria Germany Israel Ireland Mexico Slovenia Turkey the USA and Zimbabwe *A Journey Through Discrete Mathematics* Martin Loeb, Jaroslav Nešetřil, Robin Thomas, 2017-10-11 This collection of high quality articles in the field of combinatorics geometry algebraic topology and theoretical computer science is a tribute to Ji Matoušek who passed away prematurely in March 2015 It is a collaborative effort by his colleagues and friends who have paid particular attention to clarity of exposition something Jirka would have approved of The original research articles surveys and expository articles written by leading experts in their respective fields map Ji Matoušek's numerous areas of mathematical interest *Combinatorial, Computational, and Applied Algebraic Geometry* Serkan Hoşten, Diane Maclagan, Frank Sottile, 2025-10-01 This volume consists of surveys on topics to which Bernd Sturmfels has contributed over his mathematical career invariant theory Gröbner bases toric ideals and varieties algebraic methods in discrete and convex optimization hypergeometric systems algebraic statistics likelihood geometry tropical geometry chemical reaction networks numerical methods in algebraic geometry sums of squares tropical geometry tensors and algebraic vision Each article gives a gentle introduction to the topic Many contributions summarize the state of the art in each subject The volume is perfect for anyone who wishes an entry point to any one of these diverse topics **New Trends in Intuitive Geometry** Gergely Ambrus, Imre Bárány, Károly J. Böröczky, Gábor Fejes Tóth, János Pach, 2018-11-03 This volume contains 17 surveys that cover many recent developments in Discrete Geometry and related fields Besides presenting the state of the art of classical research subjects like packing and covering it also offers an introduction to new topological algebraic and computational methods in this very active research field The readers will find a variety of modern topics and many fascinating open problems that may serve as starting points for research **Recent Trends in Combinatorics** Andrew Beveridge, Jerrold R. Griggs, Leslie Hogben, Gregg Musiker, Prasad Tetali, 2016-04-12 This volume presents some of the research topics discussed at the 2014-2015 Annual Thematic Program Discrete Structures Analysis and Applications at the Institute for Mathematics and its Applications during Fall 2014 when combinatorics was the focus Leading experts have written surveys of research problems making state of the art results more conveniently and widely available The three part structure of the volume reflects the three workshops held during Fall 2014 In the first part topics on extremal and probabilistic combinatorics are presented part two focuses on additive and analytic combinatorics and part three presents topics in geometric and enumerative combinatorics This book will be of use to those who research combinatorics directly or apply combinatorial methods to other fields **Thirty-three Miniatures** Jiří Matoušek, 2010-01-01 Contains a collection of clever mathematical applications of linear algebra mainly in combinatorics geometry and algorithms Each chapter covers a single main result with motivation and full proof in at most ten pages and can be read independently of all other chapters with minor exceptions assuming only a modest background in

linear algebra from publisher description Numerical Methods for Least Squares Problems, Second Edition Åke Björck, 2024-07-05 The method of least squares discovered by Gauss in 1795 is a principal tool for reducing the influence of errors when fitting a mathematical model to given observations Applications arise in many areas of science and engineering The increased use of automatic data capturing frequently leads to large scale least squares problems Such problems can be solved by using recent developments in preconditioned iterative methods and in sparse QR factorization The first edition of Numerical Methods for Least Squares Problems was the leading reference on the topic for many years The updated second edition stands out compared to other books on this subject because it provides an in depth and up to date treatment of direct and iterative methods for solving different types of least squares problems and for computing the singular value decomposition It also is unique because it covers generalized constrained and nonlinear least squares problems as well as partial least squares and regularization methods for discrete ill posed problems The bibliography of over 1 100 historical and recent references provides a comprehensive survey of past and present research in the field This book will be of interest to graduate students and researchers in applied mathematics and to researchers working with numerical linear algebra applications Compact Numerical Methods for Computers John C. Nash, 1979 This second edition of Compact Numerical Methods for Computers presents reliable yet compact algorithms for computational problems As in the previous edition the author considers specific mathematical problems of wide applicability develops approaches to a solution and the consequent algorithm and provides the program steps He emphasizes useful applicable methods from various scientific research fields ranging from mathematical physics to commodity production modeling While the ubiquitous personal computer is the particular focus the methods have been implemented on computers as small as a programmable pocket calculator and as large as a highly parallel supercomputer New to the Second Edition Presents program steps as Turbo Pascal code Includes more algorithmic examples Contains an extended bibliography The accompanying software available by coupon at no charge includes not only the algorithm source codes but also driver programs example data and several utility codes to help in the software engineering of end user programs The codes are designed for rapid implementation and reliable use in a wide variety of computing environments Scientists statisticians engineers and economists who prepare modify programs for use in their work will find this resource invaluable Moreover since little previous training in numerical analysis is required the book can also be used as a supplementary text for courses on numerical methods and mathematical software *Intelligent Routines II* George A. Anastassiou, Iuliana F. Iatan, 2013-12-05 Intelligent Routines II Solving Linear Algebra and Differential Geometry with Sage contains numerous of examples and problems as well as many unsolved problems This book extensively applies the successful software Sage which can be found free online <http://www.sagemath.org> Sage is a recent and popular software for mathematical computation available freely and simple to use This book is useful to all applied scientists in mathematics statistics and engineering as well for late undergraduate and graduate students of above subjects It is the first

such book in solving symbolically with Sage problems in Linear Algebra and Differential Geometry Plenty of SAGE applications are given at each step of the exposition *Math Science Library* cdc,1971
