The Human Brand Chris Malone,Susan T. Fiske,2013-09-10 Why we choose companies and brands in the same way that we unconsciously perceive judge and behave toward one another People everywhere describe their relationships with brands in a deeply personal way we hate our banks love our smartphones and think the cable company is out to get us What s actually going on in our brains when we make these judgments Through original research customer loyalty expert Chris Malone and top social psychologist Susan Fiske discovered that our perceptions arise from spontaneous judgments on warmth and competence the same two factors that also determine our impressions of people We see companies and brands the same way we automatically perceive judge and behave toward one another As a result to achieve sustained success companies must forge genuine relationships with customers And as customers we have a right to expect relational accountability from the companies and brands we support Applies the social psychology concepts of warmth what intentions others have toward us and competence how capable they are of carrying out those intentions to the way we perceive and relate to companies and brands Features in depth analyses of companies such as Hershey s Domino s Lululemon Zappos Amazon Chobani Sprint and more Draws from original research evaluating over 45 companies over the course of 10 separate

studies The Human Brand is essential reading for understanding how and why we make the choices we do as well as what it takes for companies and brands to earn and keep our loyalty in the digital age **The Public Relations Journal** ,1985

Masters of Mathematics Robert A. Nowlan,2017-05-13 The original title for this work was Mathematical Literacy What Is It and Why You Need it The current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners The book is not a mathematical text and there are no assigned exercises or exams It is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing These feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied Mathematics education needs a radical reform There is more than one way to accomplish this Here the author presents his approach of wrapping mathematical ideas in a story To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them What is necessary to be mathematically literate It s not about solving algebraic equations or even making a geometric proof These are valuable skills but not evidence of literacy We often seek answers but learning to ask pertinent questions is the road to mathematical literacy Here is the good news new mathematical ideas have a way of finding applications This is known as the unreasonable effectiveness of mathematics **Return of the Straight Dope** Cecil Adams,1994-04-12 When inquiring minds want to know there is someone to turn to for an answer The Wall Street Journal Cecil Adams s first two books covered everything from the real lyrics to Louie Louie to whatever became of Einstein s brain You probably thought you couldn t stand any more genius in one lifetime Well fasten your intellectual seat belts In Return of the Straight Dope you ll find 100% guaranteed top quality brilliance on every page as Adams winsomely and wisely answers questions like these Can people really hear radio broadcasts through their teeth What does Queen Elizabeth carry in that purse anyway So how DO porcupines mate And many more When you hear the answers you ll be glad someone asked the questions
