The Statistical Analysis Of Failure Time Data:

The Statistical Analysis of Failure Time Data John D. Kalbfleisch, Ross L. Prentice, 2002-09-09 Contains additional discussion and examples on left truncation as well as material on more general censoring and truncation patterns Introduces the martingale and counting process formulation swill be in a new chapter Develops multivariate failure time data in a separate chapter and extends the material on Markov and semi Markov formulations Presents new examples and applications of data analysis [The Statistical Analysis of Failure Time Data](#) J. Prentice, Shanshan Zhao, 2019-05-14 The Statistical Analysis of Multivariate Failure Time Data A Marginal Modeling Approach provides an innovative look at methods for the analysis of correlated failure times The focus is on the use of marginal single and marginal double failure hazard rate estimators for the extraction of regression information For example in a context of randomized trial or cohort studies the results go beyond that obtained by analyzing each failure time outcome in a univariate fashion The book is addressed to researchers practitioners and graduate students and can be used as a reference or as a graduate course text Much of the literature on the analysis of censored correlated failure time data uses frailty or copula models to allow for residual dependencies among failure times given covariates In contrast this book provides a detailed account of recently developed methods for the simultaneous estimation of marginal single and dual outcome hazard rate regression parameters with emphasis on multiplicative Cox models Illustrations are provided of the utility of these methods using Women s Health Initiative randomized controlled trial data of menopausal hormones and of a low fat dietary pattern intervention As byproducts these methods provide flexible semiparametric estimators of pairwise bivariate survivor functions at specified covariate histories as well as semiparametric estimators of cross ratio and concordance functions given covariates The presentation also describes how these innovative methods may extend to handle issues of dependent censorship missing and

mismeasured covariates and joint modeling of failure times and covariates setting the stage for additional theoretical and applied developments This book extends and continues the style of the classic Statistical Analysis of Failure Time Data by Kalbfleisch and Prentice Ross L Prentice is Professor of Biostatistics at the Fred Hutchinson Cancer Research Center and University of Washington in Seattle Washington He is the recipient of COPSS Presidents and Fisher awards the AACR Epidemiology Prevention and Team Science awards and is a member of the National Academy of Medicine Shanshan Zhao is a Principal Investigator at the National Institute of Environmental Health Sciences in Research Triangle Park North Carolina

Statistical Analysis of Failure Time Data with Missing Information Ping Chen, 2009 Failure time data arise in many fields and can involve different types of censoring structures and missing information We consider three cases right censored data with missing censoring indicators clustered current status data and clustered interval censored data Chapter 2 discusses regression analysis of right censored failure time data with missing censoring indicators and presents an efficient

estimation procedure based on the EM algorithm The simulation study performed indicates that the proposed methodology performs well for practical situations An illustrative example from a breast cancer clinical trial is provided Chapter 3 discusses regression analysis of clustered current status data For inference a Cox frailty model and a two step EM algorithm are presented A simulation study was conducted for the evaluation of the proposed methodology and indicates that the approach performs well for practical situations An illustrative example from a tumorigenicity experiment is provided Chapter 4 generalizes the study of Chapter 3 to clustered interval censored data Chapter 5 discusses some directions for future research

Survival Models and Data Analysis Regina C. Elandt-Johnson,Norman L. Johnson,1980-09-17 Survival analysis deals with the distribution of life times essentially the times from an initiating event such as birth or the start of a job to some terminal event such as death or pension This book originally published in 1980 surveys and analyzes methods that use survival measurements and concepts and helps readers apply the appropriate method for a given situation Four broad sections cover introductions to data univariate survival function multiple failure data and advanced topics **Statistical Analysis of Interval-censored Failure Time Data** Alicia Worrall,2015 In this thesis we will examine the statistical methods used in survival analysis applied to interval censored failure time data Interval censored data is not widely used due to the fact that it is more difficult to work with However the same methods commonly used for random censoring can be applied to interval censoring as well This includes finding the basic quantities survival curves regression analysis Bayesian regression analysis and a comparison between interval censored data and random censored data **Statistics of the**

Boolean Model for Practitioners and Mathematicians Ilya Molchanov,1997-02-12 Written by a well respected mathematician this work represents a comprehensive account of all existing methods of statistical estimation for Boolean models It summarizes the available theory concerning Boolean models in a form accessible for mathematically aware scientists working in stochastic geometry image analysis and microscopy Written in lecture note style it has two levels of presentation one orientated to applied mathematicians and the other for general mathematicians Biostatistical Genetics and Genetic Epidemiology Robert C.
