Douglas, David Liittschwager, California Academy of Sciences, 1995 North America Kevin Hillstrom, Laurie Collier Hillstrom, 2003-08-26 A concise yet thorough overview of the environmental issues problems and controversies facing the vast and diverse continent that is North America North America tells the story of this environmental awakening and the continuing problems that the continent faces It tackles the tough issues the complex problems and the political controversies of the North American environment According to some estimates one out of every nine barrels of oil used in the world every day is consumed by a North American motorist In 1996 World Wildlife Fund Canada estimated that the country was losing wilderness to development at a rate of more than one acre every 15 seconds Today this pace of destruction has been faulted for eroding much of the continent's fabulous natural wealth and new emphasis is being placed on finding a more appropriate balance between development and conservation

Endangered Species Jan A. Randall, 2018-01-18 A detailed exploration of the variety of threats that endangered species are facing around the world whether they are due to human impact or so called natural causes Endangered species is a more complex issue and problem than it may seem on the surface What species are endangered and what is causing them to become vulnerable to population decline How can essential industries such as farming housing development and manufacturing continue to thrive without harming flora and fauna that are protected Are current efforts adequate or should more be done to protect endangered species And who should be responsible for the substantial costs of working to save endangered species Endangered Species A Reference Handbook begins with an introduction that addresses major threats and extinctions in history discusses the geographical and cultural contexts in which these incidents happened highlights other key moments along the endangered species timeline and clearly shows why the topic of endangered species matters The following sections examine an unbiased synthesis of classic and contemporary studies that inform the issue of endangered species and outline the most controversial events related to endangered species and the actions that have been taken to address them The book also presents perspective essays by scholars activists and other experts to provide diverse informed opinions on the issue of endangered species and includes a data and documents chapter that applies research finding to provide answers to questions like what species are most likely to become endangered in the future and which practices have historically been the most effective at protecting vulnerable species **Endangered and Threatened Animals of Florida and Their Habitats** Chris Scott, 2004 This fully illustrated book is a comprehensive yet convenient and easy to understand guide to Florida's endangered and threatened animals and the habitats that support them Chris Scott covers all 71 species subspecies or populations of mammals birds reptiles fish crustaceans insects corals and mollusks His

The Great Work Thomas Berry, 2011-08-10 Thomas Berry is one of the most eminent cultural historians of our time Here he presents the culmination of his ideas and urges us to move from being a disrupting force on the Earth to a benign presence This transition is the Great Work the most necessary and most ennobling work we will ever undertake Berry's message is not one of doom but of hope He reminds society of its function particularly the universities and other educational institutions whose role is to guide students into an appreciation rather than an exploitation of the world around them Berry is the leading spokesperson for the Earth and his profound ecological insight illuminates the path we need to take in the realms of ethics politics economics and education if both we and the planet are to survive

The Workbook, 1994 **The Integrated Protestant Ethic and the Spirit of Environmentalism** S. Steiner-Aeschliman, 1999 The theory and data of environmental science suggest that growth in rates of population consumption and environmental degradation as a result of the activities of industrialized societies has created an ecological crisis to which modern societies must adapt However adaptation is problematic Max Weber studied adaptive social change during the industrial revolution The evolution of this new way of life was initially problematic because individuals who established industrialism were socialized under feudalism In this dissertation I consider The Protestant Ethic and the Spirit of Capitalism as a theoretical treatise framed by modern human ecology in order to study social change in the context of the ecological crisis of industrialism The Protestant Ethic is known for describing how religious ideas influenced the unfolding of modern capitalism in the West However there is nothing inherent in Protestantism that requires linkage to industrialism I argue that Protestantism has evolved and that it need not necessarily promote environmental exploitation although under industrialism it has I identify a green subculture within Protestantism and consider how Protestantism's weakness may also be its strength The very sociological structure that in the absence of ecologically realistic norms permits widespread ecosystem degradation by industrial capitalism may also generate ecologically realistic norms for a natural

capitalism Weber contended that rationality was problematic because it paradoxically results in a dual crisis of management and meaning where human agency becomes imprisoned as if in an iron cage The irrational continuation of environmentally degrading social practices eventually contributes to a legitimation crisis People turn to religion as an alternative authority If science and religion converge on environmental values they might catalyze social change unless they are too distorted by ideological bias Adaptive social change only occurs if ethical and ecological values are in accordance with the sustainability of ecosystems Hence to adapt to the ecological crisis sociocultural systems require socialization into ecological realism because ecologically rational societies may still be maladaptively organized around environmentally unsustainable trajectories
