The conceptual base for each step in the instructional design model is clearly defined and described in an accessible manner. Application of and decision making about instructional design concepts are illustrated through a serial case study example carried through the steps of the design model in each chapter of the book. Opportunities are provided for readers to apply new concepts through practice and feedback activities at the end of each chapter. Up-to-date references and recommended readings with annotations allow students to further explore the concepts presented in the text. This new edition uses course management technology to illustrate design. The new CourseCompass website includes goals and objectives for each step in the model, illustrations of preinstructional materials, rubrics for evaluating products for each step in the model, concept quizzes, and much more.

Distance Education Cases From Higher Education brings the voice of the learning sciences to the study and design of distance learning. The contributors examine critical issues in the design of theoretically and pedagogically based distance education programs. Eight distance education programs are described in enough detail to allow readers with different interests to understand the pedagogical approaches and the implications of implementing those approaches. Issues of theory, pedagogy, design, assessment, communities of practice, collaboration, and faculty development are discussed. Each section of the book includes a primary chapter written by an author or authors involved with a distance education program that reflects learner-centered principles; a formal reaction to the chapter by a specialist from the learning sciences, educational evaluation, and policy administration; or the corporate sector with expertise in issues of distance learning; and an edited transcript of the authors' discussion of the primary chapter held at a symposium at the Asilomar Conference Center. A final summing up section offers two perspectives from leading scholars outside the fields of instructional design, evaluation, and the learning sciences on the approaches and thinking reflected in the rest of the book. This book is essential for researchers as well as all those engaged in delivering, supporting, or administering distance education programs at the post-secondary level. The descriptions, strategies, and principles will inform the design of continuing education as well as degree-based education and corporate education and training and distance education programs for adults.

The Perfect Online Course Michael Simonson, Terry L. Hudgins, Anymir Orellana, 2009-05-01

The Perfect Online Course Best Practices for Designing and Teaching was edited under the assumption that a perfect online course can be delivered following different instructional methods and models for design and for instruction and by implementing different teaching or instructional strategies. Such methods, models, and strategies are framed within quality educational guidelines and must be aimed towards attaining the online course's learning goals. The book seeks to make a contribution to the existing body of literature related to best practices and guidelines for designing and teaching distance courses, specifically online education. The process of selecting works suitable for this compilation included an extensive review of the journals *Quarterly Review of Distance Education* and *Distance Learning*. The book begins by covering literature related to general approaches and guidelines, continues with proposed methods and models for designing and instruction, and ends with instructional strategies to achieve engagement through interaction. The book is divided into four independent yet interrelated parts and a concluding section: Part I Introduction, Part II Best Guidelines and Standards, Part III Best Instructional Methods and Models, Part IV Best Engagement Strategies, and the concluding section. And finally, with words from Simonson who delineates the structure of a perfect online course.
