Wombats Burrow Builders Animal Architects:

Wombats Lynn George,2011-01 Presents an introduction to wombats discussing their physical characteristics eating habits and their ability to construct large complex burrows *Wombat's Burrow* Dee Phillips,2014-01-01 As the sun sets over an Australian grassland a hungry wombat leaves its burrow to spend the cool night looking for plants to eat When morning comes the wombat will waddle back to its home and spend the hot daytime hours sleeping in its protected underground bedroom In *Wombat s Burrow* kids will explore the world of these burrowing marsupials through clear text and large full color photos Age appropriate activities such as describing a wombat to a friend and critical thinking questions give readers a chance to gain insights beyond the facts and figures Fun information such as the fact that the tunnels in the wombat s burrow can be wide enough for a person to crawl through is sure to delight young readers *Wombats* Lynn George,2010-08-15 Wombats dig their large burrows in the southern parts of Australia The burrows are well designed to provide good airflow and to keep sleeping wombats dry even during rainstorms Readers will be intrigued by this interesting creature and its habitat as this book explores the full range from general life cycle facts To The parts of a burrow **Built by Animals** Mike Hansell,2007-10-18 From termite mounds that in relative terms are three times as tall as a skyscraper to the elaborate nests of social birds and the deadly traps of spiders the constructions of the animal world can amaze and at times humble our own engineering and technology But how do creatures with such small brains build these complex structures What drives them to do it Which skills are innate and which learned Here Mike Hansell looks at the extraordinary structures that animals build whether homes traps or courtship displays and reveals the biology behind their behaviour He shows how small brained animals achieve complex feats in a small brained way by repeating many simple actions and using highly evolved self secreted materials On the other hand the building feats or tool use of large brained animals such as humans or chimps require significantly more complex and costly behaviour We look at wasp s nests leaf cutting ants caddisflies and amoebae and even the extraordinary bower bird who seduces his mate with a decorated pile of twigs baubles feathers and berries Hansell explores how animal structures evolved over time how insect societies emerge how animals can alter their wider habitat and even whether some animals have an aesthetic sense *Outlaws, Fakes and Monsters* Chris Boge,2009 *Animal Architects* John Nicholson,2003 Shells nests mounds bowers galleries dens lodges and the creative critters that build them are explored in this fascinating introduction to animal habitats The featured creature carpenters dig mold spin and weave their homes with an intricacy that will fascinate budding zoologists Children will learn how these industrious animals can even adjust their homes for temperature and comfort make escape hatches and store food for their young Familiar industrious animals such as beavers prairie dogs and spiders are included alongside the more exotic wombats oven birds and naked mole rats as memorable examples of animals that adapt to their environments and even renovate them
