in the head and the psychology of space We live in space and space surrounds us We interact with space all the time consciously or unconsciously and make decisions and actions based on our perceptions of that space Have you ever wondered how some people navigate perfectly using maps in their heads while other people get lost even with a physical map What do you mean when you say you have a poor sense of direction How do we know where we are How do we use and represent information about space This book clarifies that our knowledge and feelings emerge as a consequence of our interactions with the surrounding space and show that the knowledge and feelings direct guide or limit our spatial behavior and experience Space matters or more specifically space we perceive matters Research into spatial cognition and experience asking fundamental questions about how and why space and spatiality matters to humans has thus attracted attention It is no coincidence that the 2014 Nobel Prize in Physiology or Medicine was awarded for research into a positioning system in the brain or inner GPS and that spatial information and technology are recognized as an important social infrastructure in recent years This is the first book aimed at graduate and advanced undergraduate students pursuing this fascinating area of research The content introduces the reader to the field of spatial cognition and experience with a series of chapters covering theoretical empirical and practical issues including cognitive maps spatial orientation spatial ability and thinking geospatial information navigation assistance and environmental aesthetics

Geo-Intelligence and Visualization through Big Data Trends Bozkaya, Burçin, Singh, Vivek Kumar, 2015-08-19 The last decade has seen a tremendous increase in the volume of data collected from personal and professional sources While there have been many computational approaches available for analyzing these datasets there is also growing interest in visualizing and making sense of spatio temporal data *Geo Intelligence and Visualization through Big Data Trends* provides an overview of recent developments applications and research on the topic of spatio temporal big data analysis and visualization as well as location intelligence and analytics Focusing on emerging trends in this dynamic field this publication is an innovative resource aimed at the scholarly and professional interests of academicians practitioners and students

Visual Analytics of Movement Gennady Andrienko, Natalia Andrienko, Peter Bak, Daniel Keim, Stefan Wrobel, 2013-09-20 Many important planning decisions in society and business depend on proper knowledge and a correct understanding of movement be it in transportation logistics biology or the life sciences Today the widespread use of mobile phones and technologies like GPS and RFID provides an immense amount of data on location and movement What is needed are new methods of visualization and algorithmic data analysis that are tightly integrated and complement each other to allow end users and analysts to extract useful knowledge from these extremely large data volumes This is exactly the topic of this book As the authors show modern visual analytics techniques are ready to tackle the enormous challenges brought about by movement data and the technology and software needed to exploit them are available today The authors start by illustrating the different kinds of data available to describe movement from individual trajectories of single objects to multiple trajectories of many objects and then proceed

to detail a conceptual framework which provides the basis for a fundamental understanding of movement data. With this basis they move on to more practical and technical aspects focusing on how to transform movement data to make it more useful and on the infrastructure necessary for performing visual analytics in practice. In so doing they demonstrate that visual analytics of movement data can yield exciting insights into the behavior of moving persons and objects but can also lead to an understanding of the events that transpire when things move. Throughout the book they use sample applications from various domains and illustrate the examples with graphical depictions of both the interactive displays and the analysis results. In summary readers will benefit from this detailed description of the state of the art in visual analytics in various ways.

Researchers will appreciate the scientific precision involved; software technologists will find essential information on algorithms and systems; and practitioners will profit from readily accessible examples with detailed illustrations for practical purposes.

Wisconsin Talk Thomas Purnell, Eric Raimy, Joe Salmons, 2013-09-17 Wisconsin is one of the most linguistically rich places in North America. It has the greatest diversity of American Indian languages east of the Mississippi including Ojibwe and Menominee from the Algonquian language family, Ho Chunk from the Siouan family, and Oneida from the Iroquoian family. French place names dot the state's map. German, Norwegian, and Polish, the languages of immigrants in the nineteenth and early twentieth centuries, are still spoken by tens of thousands of people, and the influx of new immigrants speaking Spanish, Hmong, and Somali continues to enrich the state's cultural landscape. These languages and others, Walloon, Cornish, Finnish, Czech, and more, have shaped the kinds of English spoken around the state. Within Wisconsin's borders are found three different major dialects of American English, and despite the influences of mass media and popular culture, they are not merging; they are dramatically diverging. An engaging survey for both general readers and language scholars, *Wisconsin Talk* brings together perspectives from linguistics, history, cultural studies, and geography to illuminate why language matters in our everyday lives. The authors highlight such topics as words distinctive to the state, how recent and earlier immigrants have negotiated cultural and linguistic challenges, the diversity of bilingual speakers that enriches our communities, how maps can convey the stories of language, the relation of Wisconsin's Indian languages to language loss worldwide.
