providedaninternationalforumforthemostrecentresearch on the satisfiability problem SAT SAT is the classic problem of determining whether or not a propositional formula has a satisfying truth assignment It was the first problem shown by Cook to be NP complete Despite its seemingly specialized nature satisfiability testing has proved to be extremely useful in a wide range of different disciplines both from a practical as well as from a theoretical point of view For example work on SAT continues to provide insight into various fundamental problems in computation and SAT solving technology has advanced to the point where it has become the most effective way of solving a number of practical problems The SAT series of conferences are multidisciplinary conferences intended to bring together researchers from various disciplines who are interested in SAT Topics of interest include but are not limited to proof systems and proof complexity search algorithms and heuristics analysis of algorithms theories beyond the propositional hard instances and random formulae problem encodings industrial applications solvers and other tools This volume contains the papers accepted for presentation at SAT 2005 The conference attracted a record number of 73 submissions Of these 26 papers were accepted for presentation in the technical programme In addition 16 papers were accepted as shorter papers and were presented as posters during the technical programme

The accepted papers and poster papers cover the full range of topics listed in the call for papers

cation problems in hardware and software Thus SAT is becoming one of the most important core technologies to verify secure and dependable systems The topics of the conference span practical and theoretical research on SAT and its applications and include but are not limited to proof systems proof complexity search algorithms heuristics analysis of algorithms hard instances randomized formulae problem encodings industrial applications solvers splitters tools case studies and empirical results SAT is interpreted in a rather broad sense besides propositional satisfiability it includes for example the main of quantified Boolean formulae QBF and satisfiability modulo theories SMT
