Theory Of Commutative Fields Translations Of Mathematical Monographs:

Theory of Commutative Fields Masayoshi Nagata, 1993 The theory of commutative fields is a fundamental area of mathematics particularly in number theory algebra and algebraic geometry However few books provide sufficient treatment of this topic This book is a translation of the 1985 updated edition of Nagata s 1966 book both editions originally appeared in Japanese The author aimed to provide an introduction to commutative fields that would be useful to those studying the topic for the first time as well as to those wishing a reference book The book presents with as few prerequisites as possible all of the important and fundamental results on commutative fields Each chapter ends with exercises making the book suitable as a textbook for graduate courses or for independent study

Algebraic Curves and One-Dimensional Fields Fedor Bogomolov, Tihomir Petrov, 2002 This text covers the essential topics in the geometry of algebraic curves such as line and vector bundles the Riemann Roch Theorem divisors coherent sheaves and zeroth and first cohomology groups It demonstrates how curves can act as a natural introduction to algebraic geometry

Algebraic Geometry Masayoshi Miyanishi, 1994-01-01 Students often find in setting out to study algebraic geometry that most of the serious textbooks on the subject require knowledge of ring theory field theory local rings and transcendental field extensions and even sheaf theory Often the expected background goes well beyond college mathematics This book aimed at senior undergraduates and graduate students grew out of Miyanishi s attempt to lead students to an understanding of algebraic surfaces while presenting the necessary background along the way Originally published in the Japanese in 1990 it presents a self contained introduction to the fundamentals of algebraic geometry This book begins with background on commutative algebras sheaf theory and related cohomology theory The next part introduces schemes and algebraic varieties the basic language of algebraic geometry The last section brings readers to a point at which they can start to learn about the classification of algebraic surfaces

Field Theory I. S. Luthar, Inder Bir S. Passi, 2004 Starting with the basic notions and results in algebraic extensions in this final volume the authors give an exposition of the work of Galois on the solubility of equations by radicals including Kummer and Artin Schreier extensions before providing an extensive study on field theory

Affine Algebraic Geometry Jaime Gutierrez, Vladimir Shpilrain, Jie-Tai Yu, 2005 A Special Session on affine and algebraic geometry took place at the first joint meeting between the American Mathematical Society AMS and the Real Sociedad Matematica Espanola RSME held in Seville Spain This volume contains articles by participating speakers at the Session The book contains research and survey papers discussing recent progress on the Jacobian Conjecture and affine algebraic geometry and includes a large collection of open problems It is suitable for graduate students and research mathematicians interested in algebraic geometry

Geometric Theory of Functions of a Complex Variable Gennadii Mikhailovich Goluzin, 1969

Commutative Algebra Marco Fontana, Salah-Eddine Kabbaj, Bruce Olberding, Irena Swanson, 2010-09-29 Commutative algebra is a rapidly growing subject that is developing in many different directions This volume presents several of the most

recent results from various areas related to both Noetherian and non Noetherian commutative algebra This volume contains a collection of invited survey articles by some of the leading experts in the field The authors of these chapters have been carefully selected for their important contributions to an area of commutative algebraic research Some topics presented in the volume include generalizations of cyclic modules zero divisor graphs class semigroups forcing algebras syzygy bundles tight closure Gorenstein dimensions tensor products of algebras over fields as well as many others This book is intended for researchers and graduate students interested in studying the many topics related to commutative algebra Surveys in Geometry and Number Theory Nicholas Young, 2007-01-18 A collection of survey articles by leading young researchers showcasing the vitality of Russian mathematics Iwasawa Theory and Its Perspective: Volumes 1, 2, and 3 Tadashi Ochai, 2025-07-10 Iwasawa theory began in the late 1950s with a series of papers by Kenkichi Iwasawa on ideal class groups in the cyclotomic tower of number fields and their relation to p adic L functions The theory was later generalized by putting it in the context of elliptic curves and modular forms The main motivation for writing this book comprised of three volumes was the need for a total perspective that includes the new trends of generalized Iwasawa theory Another motivation is an update of the classical theory for class groups taking into account the changed point of view on Iwasawa theory Volume 1 explains the theory of ideal class groups including its algebraic aspect the Iwasawa class number formula its analytic aspect Leopoldt Kubota L functions and the Iwasawa main conjecture which is a bridge between the algebraic and the analytic aspects Volume 2 explains various aspects of the cyclotomic Iwasawa theory of p adic Galois representations Volume 3 presents additional aspects of the Iwasawa theory of p adic Galois deformations Notices of the American Mathematical Society American Mathematical Society, 1994 Mathematics of Quantization and Quantum Fields Jan Dereziński, Christian Gérard, 2023-02-09 This 2013 book now OA offers a definitive review of mathematical aspects of quantization and quantum field theory *Introduction to the Theory of Linear Nonselfadjoint Operators* Israel Gohberg, Mark Grigor'evich Kreĭn, 1978 *Jacobi Matrices and the Moment Problem* Yuriy M. Berezansky, Mykola E. Dudkin, 2023-11-29 This monograph presents the solution of the classical moment problem the construction of Jacobi matrices and corresponding polynomials The cases of strongly trigonometric complex and real two dimensional moment problems are discussed and the Jacobi type matrices corresponding to the trigonometric moment problem are shown The Berezansky theory of the expansion in generalized eigenvectors for corresponding set of commuting operators plays the key role in the proof of results The book is recommended for researchers in fields of functional analysis operator theory mathematical physics and engineers who deal with problems of coupled pendulums **Tangents and Secants of Algebraic Varieties** F. L. Zak, 1993 The book is devoted to geometry of algebraic varieties in projective spaces Among the objects considered in some detail are tangent and secant varieties Gauss maps dual varieties hyperplane sections projections and varieties of small codimension Emphasis is made on the study of interplay between irregular behavior of higher secant varieties and irregular tangencies to the original variety

Classification of varieties with unusual tangential properties yields interesting examples many of which arise as orbits of representations of algebraic groups ABSTRACT Advances in Topological Quantum Field Theory John M.

Bryden,2007-09-27 This volume is the conference proceedings of the NATO ARW during August 2001 at Kananaskis Village Canada on New Techniques in Topological Quantum Field Theory This conference brought together specialists from a number of different fields all related to Topological Quantum Field Theory The theme of this conference was to attempt to find new methods in quantum topology from the interaction with specialists in these other fields The featured articles include papers by V Vassiliev on combinatorial formulas for cohomology of spaces of Knots the computation of Ohtsuki series by N Jacoby and R Lawrence and a paper by M Asaeda and J Przytycki on the torsion conjecture for Khovanov homology by Shumakovitch Moreover there are articles on more classical topics related to manifolds and braid groups by such well known authors as D Rolfsen H Zieschang and F Cohen **Some Questions in the Theory of Moments** Mark Grigor'evich

Kreĭn,1968 **Introduction to Vertex Operator Algebras and Their Representations** James Lepowsky,Haisheng Li,2012-12-06 Introduces the fundamental theory of vertex operator algebras and its basic techniques and examples Begins with a detailed presentation of the theoretical foundations and proceeds to a range of applications Includes a number of new original results and brings fresh perspective to important works of many other researchers in algebra lie theory

representation theory string theory quantum field theory and other areas of math and physics **Monogenic Functions in Spaces with Commutative Multiplication and Applications** Sergiy A. Plaksa,Vitalii S. Shpakivskyi,2023-07-18 This monograph develops a theory of continuous and differentiable functions called monogenic functions in the sense of Gateaux functions taking values in some vector spaces with commutative multiplication The study of these monogenic functions in various commutative algebras leads to a discovery of new ways of solving boundary value problems in mathematical physics The book consists of six parts Part I presents some preliminary notions and introduces various concepts of differentiable mappings of vector spaces Part II V is devoted to the study of monogenic functions in various spaces with commutative multiplication namely three dimensional commutative algebras with two dimensional radical finite dimensional commutative associative algebras infinite dimensional vector spaces associated with the three dimensional Laplace equation and infinite dimensional vector spaces associated with axial symmetric potential fields Part VI presents some boundary value problems for axial symmetric potential fields and develops effective analytic methods of solving these boundary value problems with various applications in mathematical physics Graduate students and researchers alike benefit from this book

Number-Theoretic Methods in Cryptology Andrzej Dąbrowski,Josef Pieprzyk,Jacek Pomykała,2025-02-18 This book constitutes the refereed post conference proceedings of the 4th International Conference on Number Theoretic Methods in Cryptology NuTMiC 2024 held in Szczecin Poland during June 24 26 2024 The 9 full papers and 2 invited papers presented in this book were carefully reviewed and selected from 12 submissions They were organized in topical sections as follows

invited talks elliptic curves in cryptography number theory algebraic structures and public key cryptography *Linear and Quasi-linear Equations of Parabolic Type* Ol'ga A. Ladyženskaja, Vsevolod Alekseevich Solonnikov, 1988 Equations of parabolic type are encountered in many areas of mathematics and mathematical physics and those encountered most frequently are linear and quasi linear parabolic equations of the second order In this volume boundary value problems for such equations are studied from two points of view solvability unique or otherwise and the effect of smoothness properties of the functions entering the initial and boundary conditions on the smoothness of the solutions
