Mauldin,2012-12-06 The information revolution is upon us Whereas the industrial revolution heralded the systematic augmentation of human physical limitations by harnessing external energy sources the information revolution strives to

augment human memory and mental processing limitations by harnessing external computational resources. Computers can accumulate, transmit, and output much more information and in a more timely fashion than more conventional printed or spoken media. Of greater interest, however, is the computer's ability to process, classify, and retrieve information selectively in response to the needs of each human user. One cannot drink from the fire hydrant of information without being immediately flooded with irrelevant text. Recent technological advances such as optical character readers only exacerbate the problem by increasing the volume of electronic text. Just as steam and internal combustion engines brought powerful energy sources under control to yield useful work in the industrial revolution, so must we build computational engines that control and apply the vast information sources that they may yield useful knowledge. Information science is the study of systematic means to control, classify, process, and retrieve vast amounts of information in electronic form. In particular, several methodologies have been developed to classify texts manually by means of human indexers as illustrated quite clearly at the National Library of Medicine, and many computational techniques have been developed to search textual data bases automatically such as full text keyword searches.

In general **Biological Science** Biological Sciences Curriculum Study, 1996 **Evolution** Brian Hall, 2011-08-24 If you want to know whether evolution is a science, how life began, what Charles Darwin really said about evolution, why a fungus is more closely related to humans than to a plant, how experiments in evolution can be carried out, why birds are flying dinosaurs, how we manipulate the evolution of other species, and if you want a clear treatment of the processes that result in evolution, then this is the book for you. Written for those with a minimal science background, *Evolution: Principles and Processes* provides a concise introduction of evolutionary topics for the one-term course. Using an engaging writing style and a wealth of full-color illustrations, Hall covers all topics from the origin of the universe, Earth, the origin of life, and on to how humans influence the evolution of other species. He brings together the principles and processes that explain evolutionary change and discusses the patterns of life that have resulted from the operation of evolution over the past 3.5 billion years. This overview, coupled with numerous case studies and examples, helps readers understand and truly appreciate the origin and diversity of life.

Advanced Concepts, Methods, and Applications in Semantic Computing Daramola, Olawande, Moser, Thomas, 2020-12-18 Semantic computing is critical for the development of semantic systems and applications that must utilize semantic analysis, semantic description, semantic interfaces, and semantic integration of data and services to deliver their objectives. Semantic computing has enormous capabilities to enhance the efficiency and throughput of systems that are based on key emerging concepts and technologies such as semantic web, internet of things, blockchain technology, and knowledge graphs. Thus, research that expounds advanced concepts, methods, technologies, and applications of semantic computing for solving challenges in real-world domains is vital. *Advanced Concepts, Methods, and Applications in Semantic Computing* is a scholarly reference book that provides a sound theoretical foundation for the application of semantic methods, concepts, and technologies for practical problem solving. It is designed as a comprehensive

and reliable resource on how semantic oriented approaches can be used to aid new emergent technologies and tackle real world problems Covering topics that include deep learning machine learning blockchain technology and semantic web services this book is ideal for professionals academicians researchers and students working in the field of semantic computing in various disciplines including but not limited to software engineering systems engineering knowledge engineering electronic commerce computer science and information technology
