Paradigm Shift in International Economic Law Rule-Making Julien Chaisse, Henry Gao, Chang-fa Lo, 2017-11-13 The TPP was negotiated among 12 economically diverse countries including some most highly developed and rich countries i e the United States Japan Australia Canada New Zealand and Singapore some newly industrialized countries i e Mexico and Malaysia and some less developed countries i e Peru Chile and Vietnam A new paradigm created in this context is that countries with vastly different economic developments can actually agree on a set of very high standards to regulate their economic activities to liberalize their trade and to protect intellectual property and foreign investment The contents of the TPP also reflect its status of being a new paradigm as the 21st Century Trade Agreement and being a pioneer in rule making in many key regulatory areas These include not only the improved and enhanced rules on traditional issues already covered by the WTO such as goods services and IP rights but also the carefully designed rules in areas that have never been addressed in the WTO or comprehensively covered in other FTAs such as state owned enterprises electronic commerce and labor and environmental issues Although the United States has withdrawn from the TPP the remaining countries are still putting efforts into establishing a TPP without the United States or a TPP with China Economically speaking the current 11 parties account for about 20 % of the global economy If such agreement is put into force there will be significant implications for the region for the multilateral system and even for other FTAs The book addresses the potential of the TPP to change the ways trade and investments are conducted and argues for its potential to be the start of an international trade economic law revolution The book elaborates the relationship between the TPP and other existing trade agreements such as the WTO and other FTAs and explains how the TPP is to deal with traditional and new issues Taken together the authors argue that the implications of the TPP go beyond its current membership It is hoped that the book will make an important contribution to the field of international economic law

Algorithms, Automation, and News Neil Thurman,Seth C. Lewis,Jessica Kunert,2021-05-18 This book examines the growing importance of algorithms and automation including emerging forms of artificial intelligence in the gathering composition and distribution of news In it the authors connect a long line of research on journalism and computation with scholarly and professional terrain yet to be explored Taken as a whole these chapters share some of the noble ambitions of the pioneering publications on reporting algorithms such as a desire to see computing help journalists in their watchdog role by holding power to account However they also go further firstly by addressing the fuller range of technologies that computational journalism now consists of from chatbots and recommender systems to artificial intelligence and atomised journalism Secondly they advance the literature by demonstrating the increased variety of uses for these technologies including engaging underserved audiences selling subscriptions and recombining and re using content Thirdly they problematise computational journalism by for example pointing out some of the challenges inherent in applying artificial intelligence to investigative journalism and in trying to preserve public service values Fourthly they offer suggestions for future research and practice including by presenting a framework for developing democratic news recommenders and another that may help us think about computational journalism in a more integrated structured manner The chapters in this book were originally published as a special issue of Digital Journalism *Algorithmic Gatekeeping for Professional Communicators* Arjen van Dalen,2023-05-30 This book provides a critical study of the power trust and legitimacy of

algorithmic gatekeepers The news and public information which citizens see and hear is no longer solely determined by journalists but increasingly by algorithms Van Dalen demonstrates the gatekeeping power of social media algorithms by showing how they affect exposure to diverse information and misinformation and shape the behaviour of professional communicators Trust and legitimacy are foregrounded as two crucial antecedents for the acceptance of this algorithmic power This study reveals low trust among the general population in algorithms performing journalistic tasks and a perceived lack of legitimacy of algorithmic power among professional communicators Drawing on case studies from YouTube and Instagram this book challenges technological deterministic discourse around filter bubbles and echo chambers and shows how algorithmic power is situated in the interplay between platforms audiences and professional communicators Ultimately trustworthy algorithms used by news organizations and social media platforms as well as algorithm literacy training are proposed as ways forward towards democratic algorithmic gatekeeping Presenting a nuanced perspective which challenges the deep divide between techno optimistic and techno pessimistic discourse around algorithms Algorithmic Gatekeeping is recommended reading for journalism and communication researchers in related fields The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license
