Architecture and Anthropology Adam Jasper, 2020-05-21 Both architecture and anthropology emerged as autonomous theoretical disciplines in the 18th century enlightenment Throughout the 19th century the fields shared a common icon the primitive hut and a common concern with both routine needs and ceremonial behaviours Both could lay strong claims to a special knowledge of the everyday And yet in the 20th century notwithstanding genre classics such as Bernard Rudofsky's *Architecture without Architects* or Paul Oliver's *Shelter* and various attempts to make architecture anthropocentric such as Corbusier's *Modulor*

disciplinary exchanges between architecture and anthropology were often disappointingly slight This book attempts to locate the various points of departure that might be taken in a contemporary discussion between architecture and anthropology The results are radical post colonial theory is here counterpoised to 19th century theories of primitivism archaeology is set against dentistry fieldwork is juxtaposed against indigenous critique and climate science is applied to questions of shelter This publication will be of interest to both architects and anthropologists The chapters in this book were originally published within two special issues of Architectural Theory Review

Architecture, Liberty and Civic Order Carroll William Westfall,2016-03-09 This book brings to light central topics that are neglected in current histories and theories of architecture and urbanism These include the role of imitation in earlier centuries and its potential role in present practice the necessary relationship between architecture urbanism and the rural districts and their counterpart in the civil order that builds and uses what is built The narrative traces two models for the practice of architecture One follows the ancient model in which the architect renders his service to serve the interests of others it survives and is dominant in modernism The other first formulated in the fifteenth century by Leon Battista Alberti has the architect use his talent in coordination with others to contribute to the common good of a republican civil order that seeks to protect its own liberty and that of its citizens Palladio practiced this way and so did Thomas Jefferson when he founded a uniquely American architecture the counterpart to the nation s founding This narrative gives particular emphasis to the contrasting developments in architecture on the opposite sides of the English Channel The book presents the value for clients and architects today and in the future of drawing on history and tradition It stresses the importance indeed the urgency of restoring traditional practices so that we can build just beautiful and sustainable cities and rural districts that will once again assist citizens in living not only abundantly but also well as they pursue their happiness **The Routledge**
