Relations and Kleene Algebra in Computer Science Rudolf Berghammer, Bernhard Möller, Georg Struth, 2008-03-28 The book constitutes the joint refereed proceedings of the 10th International Conference on Relational Methods in Computer Science RelMiCS 2008 and the 5th International Conference on Applications of Kleene Algebras AKA 2008 held in Manchester UK in April 2008 The 26 revised full papers presented together with 2 invited papers were carefully reviewed and selected from numerous submissions The papers describe the calculus of relations and similar algebraic formalisms as methodological and conceptual tools with special focus on formal methods for software engineering logics of programs and links to neighbouring disciplines Their scope comprises relation algebra fixpoint calculi semiring theory iteration algebras process algebras and dynamic algebras Applications include formal algebraic modeling the semantics analysis and development of programs formal language theory and combinatorial optimization

Analysis of Real-World Security Protocols in a Universal Composability Framework Max Tuengerthal, 2013 Security protocols employed in practice are used in our everyday life and we heavily depend on their security The complexity of these protocols still poses a big challenge on their comprehensive analysis To cope with this complexity a promising approach is modular security analysis based on universal composability frameworks such as Canetti s UC model This appealing approach has however only very rarely been applied to the analysis of existing real world protocols Either the analysis was not fully modular or it could only be applied to idealized variants of the protocols The main goal of

this thesis therefore is to push modular protocol analysis as far as possible but without giving up on accurate modeling. Our main contributions in a nutshell: An ideal functionality for symmetric key cryptography that provides a solid foundation for faithful composable cryptographic analysis of real world security protocols. A computational soundness result of formal analysis for key exchange protocols that use symmetric encryption. Novel universal and joint state composition theorems that are applicable to the analysis of real world security protocols. Case studies on several security protocols: SSL, TLS, IEEE 802.11i, WPA2, SSH, IPsec and EAP PSK. We showed that our new composition theorems can be used for a faithful modular analysis of these protocols. In addition we proved composable security properties for two central protocols of the IEEE standard 802.11i: namely the 4 Way Handshake Protocol and the CCM Protocol. This constitutes the first rigorous cryptographic analysis of these protocols. While our applications focus on real world security protocols, our theorems, models and techniques should be useful beyond this domain.

Implementation and Application of Automata Jacques Farré, 2006-02-14. This book constitutes the thoroughly refereed post proceedings of the 10th International Conference on Implementation and Application of Automata, CIAA 2005, held in Sophia Antipolis, France, in June 2005. The 26 revised full papers and 8 revised poster papers presented together with 2 invited contributions were selected from 87 submissions and have gone through two rounds of reviewing and improvement. The topics covered show applications of automata in many fields including mathematics, linguistics, networks, XML processing, biology and music.

This book constitutes the refereed proceedings of the 7th International Conference on Coordination Models and Languages, COORDINATION 2005, held in Namur, Belgium, in April 2005. The 19 revised full papers presented were carefully reviewed and selected from 88 submissions. Among the topics addressed are: Web services, safe ambients, process calculus, abstract verification, role based software delegation, modeling distributed information flow, adaptive Web content provision, global computing, mobile agents, mobile computing, multithreaded code generation, shared data space, coordination languages, automata, specifications, time aware coordination and service discovery.

Algebraic Methodology and Software Technology Michael Johnson, Varmo Vene, 2006-09-27. This is the refereed proceedings of the 11th International Conference on Algebraic Methodology and Software Technology. The book collects 24 revised full papers together with 3 system demonstrations and 3 invited talks. Coverage includes current issues in formal methods related to algebraic approaches and to software engineering including abstract data types, process algebras, algebraic specification, model checking, abstraction, refinement, μ calculus, state machines, rewriting, Kleene algebra, programming logic and formal software development.

Theoretical Computer Science: Exploring New Frontiers of Theoretical Informatics Jan van Leeuwen, Osamu Watanabe, Masami Hagiya, Peter D. Mosses, Takayasu Ito, 2000-01-01. In 1996 the International Federation for Information Processing (IFIP) established its first Technical Committee on foundations of computer science, TC1. The aim of IFIP TC1 is to support the development of theoretical computer science as a fundamental science and to promote the

exploration of fundamental concepts models theories and formal systems in order to understand laws limits and possibilities of information processing This volume constitutes the proceedings of the first IFIP International Conference on Theoretical Computer Science IFIP TCS 2000 Exploring New Frontiers of Theoretical Informatics organized by IFIP TC1 held at Tohoku University Sendai Japan in August 2000 The IFIP TCS 2000 technical program consists of invited talks contributed talks and a panel discussion In conjunction with this program there are two special open lectures by Professors Jan van Leeuwen and Peter D Mosses The decision to hold this conference was made by IFIP TC1 in August 1998 and since then IFIP TCS 2000 has benefited from the efforts of many people in particular the TC1 members and the members of the Steering Committee the Program Committee and the Organizing Committee of the conference Our special thanks go to the Program Committee Co chairs Track 1 Jan van Leeuwen U Utrecht Osamu Watanabe Tokyo Inst Tech Track 2 Masami Hagiya U Tokyo Peter D Mosses U Aarhus

Mayr, John C. Mitchell, 2004-07-27 In recent years IT application scenarios have evolved in very innovative ways Highly distributed networks have now become a common platform for large scale distributed programming high bandwidth communications are inexpensive and widespread and most of our work tools are equipped with processors enabling us to perform a multitude of tasks In addition mobile computing referring specifically to wireless devices and more broadly to dynamically configured systems has made it possible to exploit interaction in novel ways To harness the flexibility and power of these rapidly evolving interactive systems there is need of radically new foundational ideas and principles there is need to develop the theoretical foundations required to design these systems and to cope with the many complex issues involved in their construction and there is need to develop effective principles for building and analyzing such systems Reflecting the diverse and wide spectrum of topics and interests within the theoretical computer science community Exploring New Frontiers of Theoretical Informatics is presented in two distinct but interrelated tracks Algorithms Complexity and Models of Computation Logic Semantics Specification and Verification Exploring New Frontiers of Theoretical Informatics contains 46 original and significant contributions addressing these foundational questions as well as 4 papers by outstanding invited speakers These papers were presented at the 3rd IFIP International Conference on Theoretical Computer Science TCS 2004 which was held in conjunction with the 18th World Computer Congress in Toulouse France in August 2004 and sponsored by the International Federation for Information Processing IFIP
