Theories and Simulations of Complex Social Systems Vahid Dabbaghian,Vijay Kumar Mago,2013-10-27 Research into social systems is challenging due to their complex nature Traditional methods of analysis are often difficult to apply effectively as theories evolve over time This can be due to a lack of appropriate data or too much uncertainty It can also be the result of problems which are not yet understood well enough in the general sense so that they can be classified and an appropriate solution quickly identified Simulation is one tool that deals well with these challenges fits in well with the deductive process and is useful for testing theory This field is still relatively new and much of the work is necessarily innovative although it builds upon a rich and varied foundation There are a number of existing modelling paradigms being applied to complex social systems research Additionally new methods and measures are being devised through the process of conducting research We expect that readers will enjoy the collection of high quality research works from new and accomplished researchers

Servedio,Gerd Stumme,Jan Theunis,Francesca Tria,2016-05-13 This book introduces and reviews recent advances in the field in a comprehensive and non technical way by focusing on the potential of emerging citizen science and social computation frameworks coupled with the latest theoretical and modeling tools developed by physicists mathematicians computer and social scientists to analyse interpret and visualize complex data sets There is overwhelming evidence that the current

organisation of our economies and societies is seriously damaging biological ecosystems and human living conditions in the short term with potentially catastrophic effects in the long term The need to re organise the daily activities with the greatest impact energy consumption transport housing towards a more efficient and sustainable development model has recently been raised in the public debate on several global environmental issues Above all this requires the mismatch between global societal and individual needs to be addressed Recent advances in Information and Communication Technologies ICT can trigger important transitions at the individual and collective level to achieve this aim Based on the findings of the collaborative research network EveryAware the following developments among the emerging ICT technologies are discussed in depth in this volume Participatory sensing where ICT development is pushed to the level where it can support informed action at the hyperlocal scale providing capabilities for environmental monitoring data aggregation and mining as well as information presentation and sharing Web gaming social computing and internet mediated collaboration where the Web will continue to acquire the status of an infrastructure for social computing allowing users cognitive abilities to be coordinated in online communities and steering the collective action towards predefined goals Collective awareness and decision making where the access to both personal and community data collected by users processed with suitable analysis tools and re presented in an appropriate format by usable communication interfaces leads to a bottom up development of collective social strategies
