Multiple Correspondence Analysis and Related Methods Michael Greenacre, Jörg Blasius, 2006-06-23 As a generalization of simple correspondence analysis multiple correspondence analysis MCA is a powerful technique for handling larger more complex datasets including the high dimensional categorical data often encountered in the social sciences marketing health economics and biomedical research Until now however the literature on the subject has been scattered leaving many in these fields no comprehensive resource from which to learn its theory applications and implementation Multiple Correspondence Analysis and Related Methods gives a state of the art description of this new field in an accessible self contained textbook format Explaining the methodology step by step it offers an exhaustive survey of the different approaches taken by researchers from different statistical schools and explores a wide variety of application areas Each chapter includes empirical examples that provide a practical understanding of the method and its interpretation and most chapters end with a Software Note that discusses software and computational aspects An appendix at the end of the book gives further computing details along with code written in the R language for performing MCA and related techniques The code and the datasets used in the book are available for download from a supporting Web page Providing a unique multidisciplinary perspective experts in MCA from both statistics and the social sciences contributed chapters to the book The editors unified the notation and coordinated and cross referenced the theory across all of the chapters making the book read seamlessly Practical accessible and thorough Multiple Correspondence Analysis and Related Methods brings the theory and applications of MCA under one cover and provides a valuable addition to your statistical toolbox

Correspondence Analysis in the Social Sciences Michael Greenacre, Jörg Blasius, 1994-09-21 The first part of the book deals with basic concepts of correspondence analysis and related methods for analyzing cross tabulations It then looks at the multivariate case when there are several variables of interest including the relationship to cluster analysis factor analysis and reliability of measurement Applications to longitudinal data event history data panel data and trend data are demonstrated

Multivariate Analysis of Categorical Data: Applications John P. Geer, 1993 A bonus is the insightful introduction by series editor Jan de Leeuw putting applied statistics into perspective blurring the somewhat artificial distinction between exploratory and confirmatory analysis Throughout the volume strong attention is paid to the practical issues and to limitations of the analytical approaches e g the effects of the number of categories within a variable on the resulting model This seems especially useful given that the intended audience includes nitty gritty users and less theoretically inclined readers John P Van de Geer is careful to head off the reader's temptation to base interpretation on the old the computer says it so it must be right routine by pointing out easy but faulty conclusions such as those that might result from interactions and confounding factors Elizabeth L Rose in Structural Equation Modeling Quote for both books The set would be appropriate for use in a graduate course with guidance from an instructor who has expertise in this approach to multivariate analysis The interested researcher will find the set to be very helpful particularly in terms of developing a coherent and accurate interpretation of the results Elizabeth L Rose in Structural Equation Modeling Nonlinear analysis of categorical variables that is a variable that can sort objects into a limited number of distinct groups called categories is a useful technique for social scientists particularly for those who do survey research This book introduces readers to the application of a particular approach to categorical analysis the GIFI system or multiple correspondence analysis Using illustrative examples from a variety of disciplines Van de Geer shows how to perform these techniques using standard computer programs such as SPSS He explains when to use such programs as PRIMALS HOMALS ANACORS PRINCALS CANALS and OVERALS what conditions need to be met for effective use of each program and how to interpret the results based on the use of each of these programs Detailed examples are used throughout the book to enable readers to comprehend what is going on behind the computer program

Propensity Score Methods and Applications Haiyan Bai, M. H. Clark, 2018-11-20 A concise introductory text Propensity Score Methods and Applications describes propensity score methods PSM and how they are used to balance the distributions of observed covariates between treatment conditions as a means to reduce selection bias This new QASS title specifically focuses on the procedures of implementing PSM for research in social sciences instead of merely demonstrating the effectiveness of the method Using succinct and approachable language to introduce the basic concepts of PSM authors Haiyan Bai and M H Clark present basic concepts assumptions procedures available software packages and step by step examples for implementing PSM using real world data with exercises at the end of each chapter allowing readers to replicate examples on their own
