Therapeutic Rtms Neurology Principles Recommendations:

Therapeutic rTMS in Neurology Thomas Platz, 2015-12-16 This comprehensive reference on therapeutic repetitive transcranial magnetic stimulation rTMS documents the current status in the field. The main focus is the clinical applications of rTMS tested to date including treatment of paresis aphasia and visual neglect in stroke patients therapy for motor impairment in Parkinson's disease and applications for tinnitus and neuropathic pain. Based on the available clinical evidence RCTs meta analyses and systematic reviews combined with the personal experience of experts a clinically oriented best evidence synthesis is provided for each application together with a clear description of rTMS algorithms that generate clinical benefits in the target domain. A further feature is the presentation of a theoretical model of therapeutic action for each therapeutic target. The book will be invaluable for clinicians and researchers in neurology and related fields including neurologists psychiatrists as well as ENT and pain specialists.

Therapeutics of Neural Stimulation for Neurological Disorders Yuping Wang, 2023-11-24 This book mainly focuses on diversity of brain diseases such as sleep disorders major depression disorder anxiety disorders epilepsy cognitive disorders etc. It introduces the current pathological mechanisms of various diseases from the perspective of basic theories and research. It introduces the clinical evaluation and treatment of the above diseases from the clinical perspective. In addition the current frontier research on therapeutics of neural stimulation for the above brain disorder was introduced such as Transcranial electrical stimulation magnetic stimulation ultrasonic stimulation etc and the therapeutic strategy and stimuli parameters for reference were proposed. This book is aimed at clinical students doctors and researchers in the field of neurology. Based on major brain diseases this book systematically proposed the maneuverability safety and effectiveness of neural stimulation technologies in the treatment of major brain diseases.

Non-invasive Brain Stimulation in Neurology and Psychiatry Ignacio Obeso, Antonio Oliviero, Marjan Jahanshahi, 2017-04-11 The potential efficacy of non invasive brain stimulation procedures for the management of specific symptoms in diverse neurological and psychiatric conditions has been tested in the past decade or so For example repetitive transcranial magnetic stimulation rTMS over prefrontal areas has been extensively investigated as a treatment for patients with medication resistant depression and has been shown to be associated with improvement of mood Similarly non invasive stimulation techniques have been applied to various symptoms of Parkinson's disease such as bradykinesia and dyskinesias with variable degrees of success reported However attempts to expand previously observed clinical improvements to other neurological disorders e.g. Tourette's syndrome autism epilepsy has been controversial In trying to bypass potential confounding elements researchers aim to target neural populations altered in disease to either increase or decrease their corrupted baseline activity In addition a complementary approach is to extend stimulation protocols that results enhanced behavior in healthy participants This Frontiers Research Topic on non invasive brain stimulation and enhancement of function tries to combine a series of articles from researchers who used non invasive brain stimulation to aim improvement of either a motoric cognitive or behavioral nature investigated behaviorally physiologically or using brain imaging techniques in clinical populations Investigation of the relation between enhancement of function in healthy populations and clinical improvement in patients with neurological or psychiatric disorders needs further consideration
