The Physics of Metals and Metallography ,1973 **Pancreatic Cancer** Gloria H. Su,2008-02-01 Pancreatic ductal adenocarcinoma is the fourth leading cause of cancer death in the United States Annually approximately 30 000 Americans are diagnosed with the disease and most will die from it within five years P creatic ductal adenocarcinoma is unique because of its late onset in age high mortality small tumor samples infiltrated with normal cells and a lack of both early detection and effective therapies Some of these characteristics have made studying this disease a challenge Pancreatic cancer develops as a result of the accumulation of genetic alterations in cancer causing genes such as the oncogenes and the tumor s pressor genes In the last decade major progress has been made in identifying important oncogenes and tumor suppressor genes for the disease In Panc atic Cancer Methods and Protocols we review the classical techniques that have contributed to the advances in pancreatic research and introduce new strategies that we hope will add to future breakthroughs in the field of cancer biology Pancreatic Cancer Methods and Protocols provides a broad range of protocols for molecular cellular pathological and statistical analyses of s radic and familial pancreatic cancer It covers topics from in vitro cell c tures to in vivo mouse models DNA to protein manipulation and mutation analyses to treatment development We believe that our book will prove an invaluable source of proven protocols for those who are interested in either basic or translational research in pancreatic cancer *On Physical Adsorption* Sydney Ross,James P. thesis is to investigate the neural mechanisms of individual susceptibility to compulsive alcohol use a key feature of alcohol addiction and the potential role of sex as a biological variable In paper I we characterized susceptibility to developing compulsive alcohol self administration in rats We identified an ensemble of neurons in the central nucleus of the amygdala CeA that promoted compulsive self administration We identified these neurons as PKC neurons one of two major subpopulations in the central nucleus Lastly we investigated the causal role of PKC itself in compulsive self administration by knocking down its expression and found that this reduced compulsive self administration In paper II we studied the role of the GABAB receptor agonist baclofen in compulsive alcohol self administration and on activity of neurons in the centrolateral amygdala CeL This study provides a mechanistic rationale for developing improved alcohol addiction medications that target GABAB receptors and PKC neurons in the CeL In paper III we characterized sex differences in animal models of alcohol addiction including compulsive alcohol self administration We found that female rats consumed equal amount of alcohol as males in unpunished conditions but that they were more resistant to aversive consequences when alcohol rewards were paired with either footshock or quinine adulteration We investigated potential predictors of compulsive self administration in both sexes and found that for male rats compulsivity was predicted by motivation to obtain alcohol whereas for females compulsivity was promoted by stress pain factors Lastly in paper IV we characterize a novel tool for studying the role of PKC neurons a transgenic rat line that expresses Cre recombinase under the control of the PKC promoter allowing selective access to and control of PKC neurons Collectively these studies highlight PKC expressing neurons in the CeA as critical players in punishment resistant alcohol self administration pointing to a new avenue for developing targeted treatments The findings also emphasize the need for sex specific approaches in both preclinical models and clinical interventions
