Trichloroethylene, Tetrachloroethylene, and Some Other Chlorinated Agents IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, 2014 This volume of the IARC monographs provides an assessment of the carcinogenic hazards associated with exposure to seven chlorinated solvents including trichloroethylene tetrachloroethylene and their metabolites dichloroacetic acid trichloroacetic acid and chloral hydrate All these agents were previously assessed by IARC Working Groups more than 10 years ago and new epidemiological and mechanistic evidence has been considered in this reevaluation Trichloroethylene has been used in several industries such as manufacture and repair of aircraft and automobiles and in screw cutting while tetrachloroethylene is widely used in dry cleaning and as a feedstock for the production of chlorinated chemicals The IARC Monographs Working Group relied on epidemiological evidence carcinogenicity bioassays and mechanistic and other relevant data to evaluate the carcinogenic hazards to humans exposed to these agents

Toxicogenomics in Predictive Carcinogenicity Russell S Thomas, Michael D Waters, 2016-06-16 Research over the past decade has demonstrated that TGx methods of various types can be used to discriminate modes of mutagenesis as a function of dose TGx can quickly inform safety evaluation regarding potential mechanisms of conventional outcomes and can provide essential dose response information This can then be used to ascertain the sequence of key events in a putative mode of action as may apply in quantitative cancer risk assessment With the increasing complexity of research in mode of action investigations it is important to gain a better understand of approaches to data integration and health risk assessment Furthermore it is essential to consider how novel test systems and newer methods and approaches may be used in future to gain a better understanding of mechanisms Toxicogenomics in Predictive Carcinogenicity describes toxicogenomics methods in predictive carcinogenicity testing mode of action and safety evaluation and cancer risk assessment It illustrates these methods using case studies that have yielded significant new information on compounds and classes of compounds that have proven difficult to evaluate using conventional methods alone This book additionally covers current and potential toxicogenomic research using stem cells as well as new bioinformatics methods for drug discovery and environmental toxicology This publication is an indispensable tool for postgraduates academics and industrialists working in biochemistry genomics carcinogenesis pathology pharmaceuticals food technology bioinformatics risk assessment and environmental toxicology

Some Drinking-water Disinfectants and Contaminants, Including Arsenic IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, International Agency for Research on Cancer, 2004 A working group of 23 experts from 13 countries met in Lyon to evaluate the evidence for carcinogenicity of arsenic mostly naturally occurring as a contaminant of drinking water and of the water disinfectant chloramine The working group also evaluated or re evaluated four chlorination by products found in drinking water namely chloral hydrate di and trichloroacetic acids and 3 chloro 4 dichloromethyl 5 hydroxy 2 5H furanone also known as MX High level exposure to arsenic in drinking water occurs in some regions such as China Latin America Bangladesh and West Bengal The Working Group reviewed epidemiological studies of human cancer mainly ecological studies in Taiwan and Chile and several case control and cohort studies in relation to arsenic in drinking water Arsenic in drinking water primarily inorganic

as arsenate and to a lesser extent arsenite was evaluated as carcinogenic to humans Group 1 on the basis of sufficient evidence for an increased risk for cancer of the urinary bladder lung and skin Studies on inorganic arsenic in experimental animals provided limited evidence for its carcinogenicity but sufficient evidence was found in experimental animals for the carcinogenicity of dimethylarsinic acid an organic form of arsenic which produced urinary bladder tumours in rats and lung tumours in mice after oral administration IARC Monographs on the Evaluation of the Carcinogenic Risk of Chemicals to Humans ,1979

Pollutants, Human Health and the Environment Jane A. Plant,Nick Voulvoulis,K. Vala Ragnarsdottir,2012-03-05 Pollutants Human Health and the Environment is a comprehensive up to date overview of environmental pollutants that are of current concern to human health Clearly structured throughout the main body of the book is divided by pollutant type with a chapter devoted to each group of pollutants Each chapter follows a similar format to facilitate comparison and discussion For each pollutant the authors describe the sources pathways environmental fate and sinks as well as known toxicological effects Importantly the second chapter on heavy metals and other inorganic substances deals with trace element deficiencies which can have serious problems for human health Some rocks and soils are naturally low in some trace elements and intensive agriculture over the past half century has effectively mined many trace elements reducing their levels in soils and crops The final chapter is a discussion about the various risk assessment frameworks and regulations covering the main pollutants Comprehensive up to date coverage of environmental pollutants of concern to human health Clearly divided into pollutant type with each chapter devoted to a different pollutant group Clearly structured throughout with the same format for each chapter to help facilitate comparison and discussion and enable readers to prioritise chemicals of concern Description of the sources pathways environmental fate and known toxicological effect Includes contributions from leading researchers and edited by a team of experts in the field

in the dry cleaning industry by eight chlorinated solvents and related chemicals and by an additional group of seven industrial chemicals Dry cleaning is evaluated in the first and most extensive monograph Concerning exposures to specific chemicals tetrachloroethylene is identified as the most commonly used solvent during the last two to three decades The evaluation also considers exposure to the wide range of chemicals used in the treatment of spots A review of epidemiological studies on dry cleaning indicates that the risks for cancers at two sites urinary bladder and esophagus may be increased by employment in dry cleaning The monograph concludes that dry cleaning entails exposures that are possibly carcinogenic to humans A second group of monographs evaluates selected chlorinated solvents and related chemicals used in dry cleaning metal cleaning and degreasing as chemical intermediates and in the production of insecticides and herbicides Trichloroethylene tetrachloroethylene and 1,2,3 trichloropropane were classified as probably carcinogenic to humans 1,2-Dichloro-2-methylpropene was classified as possibly carcinogenic to humans The remaining chemicals chloral and chloral hydrate dichloroacetic acid trichloroacetic acid and 3-chloro-2-methylpropene could not be classified For the remaining seven chemicals used in a diversity of industrial applications vinyl fluoride was classified as probably carcinogenic to humans Furan benzofuran and vinyl acetate were classified as possibly carcinogenic to humans Acrolein crotonaldehyde and furfural could not be classified *Federal Register*, 1986-08-12 IARC Monographs on the Evaluation of the Carcinogenic Risk of Chemicals to Man IARC Working Group on the Evaluation of the Carcinogenic Risk of Chemicals to Man, 1976
