Transforming Traditions in American Biology, 1880-1915 Jane Maienschein, 1991 *A Companion to the History of American Science* Georgina M. Montgomery, Mark A. Largent, 2019-09-23 *A Companion to the History of American Science* offers a collection of essays that give an authoritative overview of the most recent scholarship on the history of American science. Covers topics including astronomy, agriculture, chemistry, eugenics, Big Science, military technology, and more. Features contributions by the most accomplished scholars in the field of science history. Covers pivotal events in U.S. history that shaped the development of science and science policy such as WWII, the Cold War, and the Women's Rights movement.

The Tangled Field Nathaniel C. Comfort, Nathaniel C. Comfort, 2009-06-30 This biographical study illuminates one of the most important yet misunderstood figures in the history of science: Barbara McClintock (1902–1992), a geneticist who integrated classical genetics with microscopic observations of the behavior of chromosomes. She was regarded as a genius and as an unorthodox, nearly incomprehensible thinker. In 1946, she discovered mobile genetic elements, which she called controlling elements. Thirty-seven years later, she won a Nobel Prize for this work, becoming the third woman to receive an unshared Nobel in science. Since then, McClintock has become an emblem of feminine scientific thinking and the tragedy of narrow-mindedness and bias in science. Using McClintock's research notes, newly available correspondence, and dozens of interviews with McClintock and others, Comfort argues that McClintock's work was neither ignored in the 1950s nor wholly accepted two decades later. Nor was McClintock marginalized by scientists throughout the decades of her alleged rejection; she remained a distinguished figure in her field. Comfort replaces the McClintock myth with a new story rich with implications for our understanding of women in science and scientific creativity.

God—or Gorilla Constance A. Clark, 2008-08-04 As scholars debate the most appropriate way to teach evolutionary theory, Constance Areson Clark provides an intriguing reflection on similar debates in the not too distant past. Set against the backdrop of the Jazz Age, *God or Gorilla* explores the efforts of biologists to explain evolution to a confused and conflicted public during the 1920s. Focusing on the use of images and popularization, Clark shows how scientists and anti-evolutionists deployed schematics, cartoons, photographs, sculptures, and paintings to win the battle for public acceptance. She uses representative illustrations and popular media accounts of the struggle to reveal how concepts of evolutionary theory changed as they were presented to and absorbed into popular culture. Engagingly written and deftly argued, *God or Gorilla* offers original insights into the role of images in communicating and miscommunicating scientific ideas to the lay public.

What Is Regeneration? Jane Maienschein, Kate MacCord, 2022-04-06 Two historians and philosophers of science offer an essential primer on the meaning and limits of regeneration In punishment for his stealing fire the Greek gods chained Prometheus to a rock where every day an eagle plucked out his liver and every night the liver regenerated While Prometheus may be a figure of myth scholars today ask whether ancient Greeks knew that the human liver does in fact have a special capacity to regenerate Some organs and tissues can regenerate while others cannot and some organisms can regenerate more fully and more easily than others Cut an earthworm in half and two wiggly worms may confront you Cut off the head of a hydra and it may grow a new head Cut off a human arm and the human will be missing an arm Why the differences What are the limits of regeneration and how when and why does it occur In this book historians and philosophers of science Jane Maienschein and Kate MacCord explore biological regeneration delving into a topic of increasing interest in light of regenerative medicine new tools in developmental and neurobiology and the urgent need to understand and repair damage to ecosystems brought on by climate change Looking across scales from germ nerve and stem cells to individual organisms and complex systems this short and accessible introduction poses a range of deep and provocative questions What conditions allow some damaged microbiomes to regenerate where others do not Why are forests following a fire said to regenerate sometimes but not always And in the face of climate change in the era called the Anthropocene can the planet regenerate to become healthy again or will the global ecosystem collapse
