Algebraic Cycles and Motives: Volume 1 Jan Nagel,Chris Peters,2007-05-03 This 2007 book is a self contained account of the subject of algebraic cycles and motives

An Introduction to Intersection Homology Theory, Second Edition Frances Kirwan,Jonathan Woolf,2006-06-07 Now more that a quarter of a century old intersection homology theory has proven to be a powerful tool in the study of the topology of singular spaces with deep links to many other areas of mathematics including combinatorics differential equations group representations and number theory Like its predecessor An Introduction to Intersection Homology Theory Second Edition introduces the power and beauty of intersection homology explaining the main ideas and omitting or merely sketching the difficult proofs It treats both the basics of the subject and a wide range of applications providing lucid overviews of highly technical areas that make the subject accessible and prepare readers for more advanced work in the area This second edition contains entirely new chapters introducing the theory of Witt spaces perverse sheaves and the combinatorial intersection cohomology of fans Intersection homology is a large and growing subject that touches on many aspects of topology geometry and algebra With its clear explanations of the main ideas this book builds the confidence needed to tackle more specialist technical texts and provides a framework within which to place them

Calabi-Yau Varieties: Arithmetic, Geometry and Physics Radu Laza,Matthias Schütt,Noriko Yui,2015-08-27 This volume presents a lively introduction to the rapidly developing and vast research areas surrounding Calabi Yau varieties and string theory With its coverage of the various perspectives of a wide area of topics such as Hodge theory Gross Siebert program moduli problems toric approach and arithmetic aspects the book gives a comprehensive overview of the current streams of mathematical research in the area The contributions in this book are based on lectures that took place during workshops with the following thematic titles Modular Forms Around String Theory Enumerative Geometry and Calabi Yau Varieties Physics Around Mirror Symmetry Hodge Theory in String Theory The book is ideal for graduate students and researchers learning about Calabi Yau varieties as well as physics students and string theorists who wish to learn the mathematics behind these varieties

Annals of Mathematics Studies Kazuya Kato,1940 **Symposium in Honor of C. H. Clemens** Aaron Bertram,James A. Carlson,Holger Kley,2002 Gathers the 14 papers presented during a March 2000 symposium on algebraic geometry The contributors survey the links between geometry and the theory of Korteweg de Vries KdV equations as well as new developments in orbifold string theory Other papers investigate orthogonal complex hyperbolic arrangements vector bundles on the cubic threefold using symmetry to count rational curves the Nash conjecture for non projective threefolds and the punctual Hilbert scheme of a symplectic fourfold No index Annotation copyrighted by Book News Inc Portland OR

Nonabelian Jacobian of Projective Surfaces Igor Reider,2013-03-02 The Jacobian of a smooth projective curve is undoubtedly one of the most remarkable and beautiful objects in algebraic geometry This work is an attempt to develop an analogous theory for smooth projective surfaces a theory of the nonabelian Jacobian of smooth

projective surfaces Just like its classical counterpart our nonabelian Jacobian relates to vector bundles of rank 2 on a surface as well as its Hilbert scheme of points But it also comes equipped with the variation of Hodge like structures which produces a sheaf of reductive Lie algebras naturally attached to our Jacobian This constitutes a nonabelian analogue of the abelian Lie algebra structure of the classical Jacobian This feature naturally relates geometry of surfaces with the representation theory of reductive Lie algebras groups This work s main focus is on providing an in depth study of various aspects of this relation It presents a substantial body of evidence that the sheaf of Lie algebras on the nonabelian Jacobian is an efficient tool for using the representation theory to systematically address various algebro geometric problems It also shows how to construct new invariants of representation theoretic origin on smooth projective surfaces [Israel Mathematical Conference Proceedings](#),1996 **The Asian Journal of Mathematics** ,2004 **Scientific and Technical Books and Serials in Print** ,1989
