Transport For Suburbia Transport For Suburbia:

Transport for Suburbia Paul Mees, 2009-12 The need for effective public transport is greater than ever in the 21st century With countries like China and India moving towards mass automobility we face the prospects of an environmental and urban health disaster unless alternatives are found It is time to move beyond the automobile age But while public transport has worked well in the dense cores of some big cities the problem is that most residents of developed countries now live in dispersed suburbs and smaller cities and towns These places usually have little or no public transport and most transport commentators have given up on the task of changing this it all seems too hard This book argues that the secret of European style public transport lies in a generalizable model of network planning that has worked in places as diverse as rural Switzerland the Brazilian city of Curitiba and the Canadian cities of Toronto and Vancouver It shows how this model can be adapted to suburban exurban and even rural areas to provide a genuine alternative to the car and outlines the governance funding and service planning policies that underpin the success of the world's best public transport systems Back cover

Human Transit Jarrett Walker, 2012-07-29 Public transit is a powerful tool for addressing a huge range of urban problems including traffic congestion and economic development as well as climate change But while many people support transit in the abstract it's often hard to channel that support into good transit investments Part of the problem is that transit debates attract many kinds of experts who often talk past each other Ordinary people listen to a little of this and decide that transit is impossible to figure out Jarrett Walker believes that transit can be simple if we focus first on the underlying geometry that all transit technologies share In *Human Transit* Walker supplies the basic tools the critical questions and the means to make smarter decisions about designing and implementing transit services *Human Transit* explains the fundamental geometry of transit that shapes successful systems the process for fitting technology to a particular community and the local choices that lead to transit friendly development Whether you are in the field or simply a concerned citizen here is an accessible guide to achieving successful public transit that will enrich any community

Extremes Of Mobility: Development And Consequences Of Transport Policy In Los Angeles Stefan Bratzel, 2023-10-06 The development of transportation policy in Los Angeles is a history of extremes in the 1920s the city had the largest regional rail network in the world which was completely abolished 40 years later In its place a vast network of freeways was built in the metropolis with a car focused mobility pattern Los Angeles became a symbol of car oriented mobility with all the negative ecological and social side effects Since the 1990s Los Angeles has been rebuilding its public rail transport with little success so far This book examines the history of Los Angeles development and identifies the key drivers that have shaped the metropolis extreme transport policies With other cities facing similar albeit less extreme transportation issues they can learn from how Los Angeles had responded and continues to adapt to its considerable transport policy problems especially in order to avoid the mobility experiences faced by the American city But to do so it is necessary to abandon the prevailing perspective which is largely limited to evaluating

transport modes road versus rail A sustainable solution to the problems of metropolitan areas will only be possible if the origins of transport with their spatial social and economic interdependencies are understood and integrated into transport policy action

Do Androids Dream of Electric Cars? James Wilt, 2020-04-22 Public transportation is in crisis Through an assessment of the history of automobility in North America the three revolutions in automotive transportation as well as the current work of committed people advocating for a different way forward James Wilt imagines what public transit should look like in order to be green and equitable Wilt considers environment and climate change economic and racial inequality urban density accessibility and safety work and labour unions privacy and control of personal data as well as the importance of public and democratic decision making Based on interviews with more than forty experts including community activists academics transit planners authors and journalists Do Androids Dream of Electric Cars explores our ability to exert power over how cities are built and for whom

Mapping Urbanities Kim Dovey, Elek Pafka, Mirjana Ristic, 2017-09-22 What is the capacity of mapping to reveal the forces at play in shaping urban form and space How can mapping extend the urban imagination and therefore the possibilities for urban transformation With a focus on urban scales Mapping Urbanities explores the potency of mapping as a research method that opens new horizons in our exploration of complex urban environments A primary focus is on investigating urban morphologies and flows within a framework of assemblage thinking an understanding of cities that is focused on relations between places rather than on places in themselves on transformations more than fixed forms and on multi scale relations from 10m to 100km With cases drawn from 30 cities across the global north and south Mapping Urbanities analyses the mapping of place identities political conflict transport flows streetlife functional mix and informal settlements Mapping is presented as a production of spatial knowledge embodying a diagrammatic logic that cannot be reduced to words and numbers Urban mapping constructs interconnections between the ways the city is perceived conceived and lived revealing capacities for urban transformation the city as a space of possibility

Petroleum Jago Dodson, Neil Sipe, Anita Nelson, 2016-10-04 The past decade has been one of the most volatile periods in global petroleum markets in living memory and future oil supply security and price levels remain highly uncertain This poses

many questions for the professional activities of planners and urbanists because contemporary cities are highly dependent on petroleum as a transport fuel How will oil dependent cities respond and adapt to the changing pattern of petroleum supplies What key strategies should planners and policy makers implement in petroleum vulnerable cities to address the challenges of moving beyond oil How might a shift away from petroleum provide opportunities to improve or remake cities for the economic social and environmental imperatives of twenty first century sustainability Such questions are the focus of contributors to this book with perspectives ranging across the planning challenge overarching petroleum futures governance transition and climate change questions the role of various urban transport nodes and household responses ways of measuring oil vulnerability and the effects on telecommunications ports and other urban infrastructure This comprehensive volume with contributions from and focusing on cities in Australia the UK the US France Germany the Netherlands and South Korea provides key insights to enable cities to plan for the age beyond petroleum
