Responsible Software Engineering Daniel J. Barrett, 2025-09-04 Today's
software applications need more than a friendly interface and correct algorithms. They also need to be responsible to be
beneficial for society and not cause harm. In an era of AI chatbots, deep fake images and videos, social media bubbles,
expanding privacy regulations, and a warming planet, it's more important than ever to practice responsible software
engineering so your products earn your users' trust and deserve it. Responsible Software Engineering gathers the wisdom of
over 100 Google employees to help you anticipate the effects of your software on the world and its inhabitants. It features
expert advice and practical case studies so you can build better applications that are more ready for real world situations.
Treating people more fairly regardless of their beliefs, culture, skin tone, and other attributes. Operating more safely to reduce
the risk of physical, psychological, or financial harm. Better protecting people's privacy, particularly when collecting personal
information. Incorporating wisdom from the social sciences, law, ethics, and other fields that many engineers may be unfamiliar
with. Reducing emissions of carbon dioxide (CO2) to address the risks of climate change.
