Misplacing your keys, forgetting someone's name at a party or coming home from the market without the most important item—these are just some of the many common memory slips we all experience from time to time. Scientists can detect subtle changes in the brain that coincide with mental decline by the time we reach age 40, and our findings show that people as young as 20 already have memory problems. *2 Weeks to a Younger Brain* will not only improve your memory but will also strengthen your physical health by reducing your risk for diabetes, heart disease and stroke. The latest research confirms that there is a lot we can do to boost our memory and keep our brains young. After three decades of helping thousands of patients improve their memory and mental acuity, Dr. Small and Gorgan are convinced that our daily lifestyle habits are directly linked to our brain health. This book will show that it only takes two weeks to form new habits that bolster cognitive abilities and help stave off or even reverse brain aging. If you commit only 14 days to *2 Weeks To A Younger Brain*, you will reap noticeable results.
