Trapping Safety Into Rules How Desirable Or Avoidable Is Proceduralization:

Trapping Safety Into Rules Corinne Bieder, Mathilde Bourrier, 2013 Rules and procedures are key features for a modern organization to function. It is no surprise to see them to be paramount in safety management. As some sociologists argue, routine and rule following is not always socially resented. It can bring people comfort and reduce anxieties of newness and uncertainty. Facing constant unexpected events entails fatigue and exhaustion. There is also no doubt that proceduralization and documented activities have brought progress, avoided recurrent mistakes and allowed for best practices to be adopted. However, it seems that the exclusive and intensive use of procedures today is in fact a threat to new progress in safety. There is an urgent need to consider this issue because there is doubt that the path chosen by many hazardous industries and activities is the most effective safety wise considering the safety level achieved today. As soon as safety is involved, there seems to be an irresistible push towards a wider scope of norms, procedures and processes whatever the context implied. This book is not a plea against proceduralization but it does take the view that it is time to reassess how far it can still go and to what benefit. Underlying these questions, there is a growing suspicion that the path taken might in fact lead to a dead end unless the concept of procedure and the conditions under which these procedures are developed are revisited.

The Just Culture Principles in Aviation Law Francesca Pellegrino, 2019-09-09 This book reviews and critically analyzes the current legal framework with regard to a more just culture for the aviation sector This new culture is intended to protect front line operators in particular controllers and pilots from legal action except in the case of willful misconduct or gross negligence by creating suitable laws regulations and standards In this regard it is essential to have an environment in which all incidents are reported moving away from fears of criminalization The approach taken until now has been to seek out human errors and identify the individuals responsible This punitive approach does not solve the problem because frequently the system itself is also at fault Introducing the framework of a just culture could ensure balanced accountability for both individuals and complex organizations responsible for improving safety Both aviation safety and justice administration would benefit from this carefully established equilibrium

Dekker,2017-10-19 Work has never been as safe as it seems today Safety has also never been as bureaucratized as it is today Over the past two decades the number of safety rules and statutes has exploded and organizations themselves are creating ever more internal compliance requirements At the same time progress on safety has slowed to a crawl Many incident and injury rates have flatlined Worse excellent safety performance on low consequence events tends to increase the risk of fatalities and disasters Bureaucracy and compliance now seem less about managing the safety of the workers we are responsible for and more about managing the liability of the people they work for We make workers do a lot that does nothing to improve their success locally Paradoxically such tightening of safety bureaucracy robs us of exactly the source of human insight creativity and resilience that can tell us how success is actually created and where the next accident may well happen It is time for Safety Anarchists people who trust people more than process who rely on horizontally coordinating experiences and innovations who push back against petty rules and coercive compliance and who help recover the dignity and expertise of human work
