VLSI Design ,1984 **Microelectronics Education** B. Courtois,N. Guillemot,G. Kamarinos,G. Stéhelin,2013-03-09 This is the third edition of the European Workshop on Microelectronics Education EWME A steady state regime has now been reached An international community of university teachers is constituted they exchange their experience and their pedagogical tools They discuss the best ways to transfer the rapidly changing techniques to their

students and to introduce them to the new physical and mathematical concepts and models for the innovative techniques devices circuits and design methods The number of abstracts submitted to EWME 2000 about one hundred enabled the scientific committee to proceed to a clear selection EWME is a European meeting Indeed authors from 20 different European countries contribute to this volume Nevertheless the participation of authors from Brazil Canada China New Zealand and USA shows that the workshop gradually attains an international dimension th The 20 century can be characterized as the century of electron The electron as an elementary particle was discovered by J J Thomson in 1897 and was rapidly used to transfer energy and information Thanks to electron universe and micro cosmos could be explored Electron became the omnipotent and omnipresent almost immaterial angel of our W orlD This was made possible thanks to electronics and for the last 30 years to microelectronics Microelectronics not only modified and even radically transformed the industrial and the every day landscapes but it also led to the so called information revolution with which begins the 21 st century

which it is relatively easy to reason using current techniques and models The designers who deserve much credit for the promotion of formal methods intended from the start that Viper be formally verified Their idea was to model Viper in a sequence of decreasingly abstract levels each of which concentrated on some aspect of the design such as the flow of control the processing of instructions and so on That is each model would be a specification of the next less abstract model and an implementation of the previous model if any The verification effort would then be simplified by being structured according to the sequence of abstraction levels These models or levels of description were characterized by the design team The first two levels and part of the third were written by them in a logical language amenable to reasoning and proof *ASIC & EDA*, 1994
