Walter Van Den Broeck:

Syntax of Dutch Hans Broekhuis, Norbert Corver, 2025-10-01 The Syntax of Dutch aims at presenting a synthesis of the currently available syntactic knowledge of Dutch. It is primarily concerned with language description and not with linguistic theory and provides support to all researchers interested in matters relating to the syntax of Dutch including advanced students of language and linguistics. *Syntax of Dutch Verbs and Verb Phrases* consists of three volumes. Volume 1 opens with a general introduction to verbs including a review of various verb classifications and discussions on inflection, tense, mood, modality and aspect. This is followed by a comprehensive discussion of complementation, argument structure and verb frame alternations. Volume 2 continues the discussion of complementation but is more specifically focused on clausal complements: the reader will find detailed discussions of finite and infinitival argument clauses, complex verb constructions and verb clustering. Volume 3 concludes with a description of adverbial modification and the overall structure of clauses in relation to e.g. word order, verb placement, wh-movement, extraposition phenomena, scrambling etc. **Janus at the Millennium**

Thomas F. Shannon, Johan P. Snapper, 2004-05-26 This volume contains a selection of articles originally presented at the Tenth Interdisciplinary Conference on Netherlandic Studies. These revised contributions relating to the common theme of Janus and the perspective of time examine Dutch language and culture from the U.S., Belgium and the Netherlands.

Genetic Narratology Dirk Van Hulle, 2024-12-17 Genetic Narratology is the first full-length volume to merge genetic criticism with narratology, offering an innovative approach to understanding literature. By examining the creative process behind literary works through drafts, manuscripts and revisions, this book reveals how narratives are shaped in real time. Through diverse case studies from Charlotte Brontë to Stephen King, this collection demonstrates how the material processes of writing influence narrative structure, pacing and even the untold. By integrating genetic criticism with narratological methods, contributors explore how stories evolve, providing fresh insights into time, space, character and suspense. Bridging the gap between the production and reception of texts, this volume makes a compelling case for incorporating genetic methods into broader narratological frameworks, enhancing not only our understanding of the genesis of literary works, ultimately enriching the reading experience but also our awareness of the ways we narrativise this genesis. The book will be of interest to students and researchers alike, offering a new set of tools for analysing narrative across different versions.
