Waddenland Outstanding Linde Egberts, Meindert Schroor, 2018 The Wadden Sea Region is comprised of the embanked coastal marshes and islands in the Wadden Sea near Denmark Germany and the Netherlands and this area retains an exceptional common history in all its aspects archaeologically economically socially and culturally Its settlement history of more than two thousand years is unrivalled and still mirrored in the landscape and even though it has never constituted a political unity it still shares a landscape and cultural heritage For example the approaches to water management and associated societal organisation developed in the region during the last millennium have set significant world standards values which were recognised by UNESCO in inscribing the Wadden Sea on its World Heritage List This book encompasses the contributions presented at the scientific symposium of prominent scientists who gathered in 2016 in Husum Germany a landmark event in sharing knowledge on the common history landscape cultural heritage of the Wadden Sea Region

Assembling the Archipelago: Heritage in Energy Transitions and Climate Action Marilena Mela, 2025-09-09 This book explores the potential of heritage to enact sustainable human environment relationships across geographical differences It does so by travelling to four archipelagoes the Wadden Islands in the Netherlands the Cyclades in Greece Shetland in Scotland and the Aeolian Islands in Italy In the face of planetary socioenvironmental crises the reliance on sustainable development strategies including the energy transition on technocratic top down solutions fail to counterbalance global agendas of extraction and growth and address environmental injustices in peripheral places This book stresses the need to think small arguing that seeds for meaningful change exist in such places and the geographically and historically situated relationships between people and environments Islands interconnected yet autonomous places with unique histories are good places to start In four archipelagoes frictions produced both by climate change and climate mitigation the fragile consensus around a solar park in the Wadden Sea conflicts around wind turbine towers in the Aegean experiments with the tides in Shetland and volcanic episodes in the Aeolian come in dialogue with the learning potential of their environmental and cultural heritage The counterposing of these stories renegotiates established discourses of heritage and sustainability and the associated courses of action in policy and planning This contribution will resonate with academics students policymakers

and activists in heritage studies environmental humanities landscape studies science and technology studies and sustainability Readers are invited to participate in the life and troubles of four island landscapes and to think along on emergent archipelagic claims towards sustainable and just futures

cognitive entity that distorts our understanding of surrounding ecologies this book argues that the starting point for ecolinguistics is an appreciation of language as not just about nature but of nature Exploring this conceptual change in the field the book presents a process view in which language is substituted by languaging emphasising the bioecologies that we cohabit with numerous other species It puts forward this perspective by looking at the theoretical considerations behind the understanding of languaging as bioecological and through examining languaging in various contexts and places Drawing on examples from across the world it addresses topics such as climate catastrophes corporate narratives questions of ecological leadership the bioecological implications of the COVID pandemic and relational landscapes It also makes use of data from across multiple bioecological settings including the dairy and agricultural industries
