Poniszewska-Maranda,Hyunhee Park,2020-06-09 This book presents the latest research findings methods and development techniques challenges and solutions concerning UPC from both theoretical and practical perspectives with an emphasis on innovative mobile and Internet services With the proliferation of wireless technologies and electronic devices there is a rapidly growing interest in Ubiquitous and Pervasive Computing UPC which makes it possible to create a human oriented computing environment in which computer chips are embedded in everyday objects and interact with the physical world Through UPC people can go online even while moving around thus enjoying nearly permanent access to their preferred services Though it has the potential to revolutionize our lives UPC also poses a number of new research challenges

Small-Scale Renewable Energy Systems Sven Ruin,Göran Sidén,2019-10-16 A revolution is ongoing in the field of small scale energy solutions which can enable lower impact on the environment more robust supply and self determination Solar power and other forms of renewable energy sources which you can implement to generate your own electricity are growing quickly Electromobility is transforming the car industry and transportation systems and can also play a role in your energy system Electricity can be used much more efficiently than before for example by using LED light variable speed motor drives and efficient home appliances Smart controls are available sometimes with free open source software All this opens up tremendous opportunities for energy independence which is the focus of this book The book introduces the reader to a number of renewable energy sources to different options for storing electricity and to smart use of electricity particularly in the context of small isolated systems This is important because many renewable energy sources are weather and season dependent and usually require storage and smart control in order to obtain a system that is completely independent of the electricity grid In the book overall system design is explained including how to combine different sources in a hybrid system Different system sizes and architectures are also covered A number of real cases are described where homes businesses and communities have achieved a high level of energy independence or are on their way to achieving it This book will prove

useful in university education in renewable energy at bachelor and master level and also for companies and private individuals who want to start or expand activities in the area of renewable energy
