

Normally, longer defrost timer intervals are used for colder loads. The defrost interval may need to be changed if the unit will not hold the compartment temperature at setpoint.

Use a longer defrost interval if defrost is not being initiated on demand.

Use a shorter defrost interval if defrost is frequently being initiated on demand.

If the unit is in CYCLE-SENTRY Null mode, the engine will start when defrost is initiated. The unit will stay in defrost until the evaporator coil temperature rises to 58 F (14 C).

Opening the Front Doors

Pull the door latch handle to open the doors and access the engine compartment. Slam the door to close it. Do not push the door closed while holding the door latch handle open or the door will not close properly.
