Turbulence A Tentative Dictionary Nato Science Series B Physics Volume 341:

Turbulence P. Tabeling, O. Cardoso, 2012-12-06 The present volume comprises the contributions of some of the participants of the NATO Advanced Studies Institute Turbulence Weak and Strong held in Cargèse in August 1994 More than 70 scientists from seniors to young students have joined together to discuss and review new and not so new ideas and developments in the study of turbulence One of the objectives of the School was to incorporate in the same meeting two aspects of turbulence which are obviously linked and which are often treated separately fully developed turbulence in two and three dimensions and weak turbulence essentially one and two dimensional systems The idea of preparing a dictionary rather than ordinary proceedings started from the feeling that the terminology of turbulence includes many long technical poorly evocative words which are usually not understood by people exterior to the field and which might be worth explaining Students who start working in the field of turbulence face a sort of curious situation on one side they are aware that turbulence is related to the disordered churning flows of torrents the powerful movements of water in the oceans the violent jet streams in the troposphere the solar eruptions and they are certainly excited to pierce the mystery of this fascinating omnipresent phenomenon

Electroweak Physics and the Early Universe Jorge C. Romão, Filipe Freire, 2013-06-29 Proceedings of a NATO ARW held in Sintra Portugal March 23-25 1994

Confined Electrons and Photons Elias Burstein, Claude Weisbuch, 2012-12-06 The optical properties of semiconductors have played an important role since the identification of semiconductors as small bandgap materials in the thirties due both to their fundamental interest as a class of solids having specific optical properties and to their many important applications On the former aspect we can cite the fundamental edge absorption and its assignment to direct or indirect transitions many body effects as revealed by exciton formation and photoconductivity On the latter aspect large scale applications such as LEDs and lasers photovoltaic converters photodetectors electro optics and non linear optic devices come to mind The eighties saw a revitalization of the whole field due to the advent of heterostructures of lower dimensionality mainly two dimensional quantum wells which through their enhanced photon matter interaction yielded new devices with unsurpassed performance Although many of the basic phenomena were evidenced through the seventies it was this impact on applications which in turn led to such a massive investment in fabrication tools thanks to which many new structures and materials were studied yielding further advances in fundamental physics

Nonlinear Spectroscopy of Solids Baldassare di Bartolo, 2013-11-21 This report presents an account of the course Nonlinear Spectroscopy of Solids Advances and Applications held in Erice Italy from June 16 to 30 1993 This meeting was organized by the International School of Atomic and Molecular Spectroscopy of the Ettore Majorana Centre for Scientific Culture The purpose of this course was to present and discuss physical models mathematical formalisms experimental techniques and applications relevant to the subject of nonlinear spectroscopy of solid state materials The universal availability and application of lasers in spectroscopy has led to the widespread observation of nonlinear effects in

the spectroscopy of materials Nonlinear spectroscopy encompasses many physical phenomena which have their origin in the monochromaticity spectral brightness coherence power density and tunability of laser sources Conventional spectroscopy assumes a linear dependence between the applied electromagnetic field and the induced polarization of atoms and molecules The validity of this assumption rests on the fact that even the most powerful conventional sources of light produce a light intensity which is not strong enough to equalize the rate of stimulated emission and that of the experimentally observed decay A different situation may arise when laser light sources are used particularly pulsed lasers The use of such light sources can make the probability of induced emission comparable to or even greater than the probability of the observed decay in such cases the nonlinearity of the response of the system is revealed by the experimental data and new properties not detectable by conventional spectroscopy will emerge

From Newton to Chaos Archie E. Roy, B.A. Steves, 2013-06-29 The reader will find in this volume the Proceedings of the NATO Advanced Study Institute held in Cortina d Ampezzo Italy between July 25 and August 6 1993 under the title From Newton to Chaos Modern Techniques for Understanding and Coping With Chaos in N Body Dynamical Systems This institute was the latest in a series of meetings held every three years from 1972 to 1990 in dynamical astronomy theoretical mechanics and celestial mechanics The proceedings from these institutes have been well received in the international community of research workers in these disciplines The present institute was well attended with 15 series of lectures being given by invited speakers in addition some 40 presentations were made by the other participants The majority of these contributions are included in these proceedings The all pervading influence of chaos in dynamical systems of even a few variables has now been universally recognised by researchers a recognition forced on us by our ability using powerful computer hardware and software to tackle dynamical problems that until twenty five years ago were intractable Doubtless it was felt by many that these new techniques provided a break through in celestial mechanics and its related disciplines And so they were

An Informal Conceptual Introduction to Turbulence Arkady Tsinober, 2009-08-29 This fully revised second edition focuses on physical phenomena and observations in turbulence and is focused on reversing misconceptions and ill defined concepts New topics include ergodicity Eulerian versus Lagrangian descriptions theory validation and anomalous scaling
