Traffic And Transport Psychology Traffic And Transport Psychology:

Traffic and Transport Psychology Geoffrey Underwood, 2005-06-09 Just as our transport systems become more and more important to our economic and social well being so they become more and more crowded and more at risk from congestion disruption and collapse Technology and engineering can provide part of the solution but the complete solution will need to take account of the behaviour of the users of the transport networks The role of psychologists in this is to understand how people make decisions about the alternative modes of transport and about the alternative routes to their destinations to understand how novice and other vulnerable users can develop safe and effective behaviours how competent users can operate within the transport system optimally and within their perceptual and cognitive limitations The contributions to this volume address these issues of how the use of our transport systems can be improved by taking into account knowledge of the behaviour of the people who use the systems Topics discussed include driver training and licensing driver impairment road user attitudes and behaviour enforcement and behaviour change driver support systems and the psychology of mobility and transport mode choice This work will be of value not only to psychologists but to all transport professionals interested in the application of psychology to traffic Handbook of Traffic Psychology Bryan E. Porter, 2026-01-01 The Handbook of Traffic Psychology 2nd Edition provides an overview of traffic psychology independent from general transport science Coverage goes from micro level topics neuropsychology through to macro level international ones culture public health continental differences The second edition has 85% content contributed by new authors and content is 100% revised including 6 new chapters 6 expanded chapters Organized into 6 sections section 1 covers theories concepts and methods Section 2 covers variables to understand in traffic psychology Section 3 covers driver problem behaviors Section 4 covers problem road users Section 5 covers countermeasures to reduce risk Section 6 covers interdisciplinary issues of note Provides review of research in traffic and transportation psychology Includes theory and methods Covers driver behavior human factors factors to reduce risk Facilitates understanding with chapter summaries of key points 100% revised plus new coverage of autonomous vehicles Traffic and Transport Psychology Talib Rothengatter, E. Carbonell Vaya (eds), 1997 Presents a balanced and representative overview of the major developments and trends in traffic and transport psychology This book deals with driver performance and social factors It presents arguments for integrated models for alternative paradigms and for a blatant a theoretical approach to driver behaviour **Traffic and Transport Psychology** Talib Rothengatter, Raphael Denis Huguenin, 2004-09-08 This volume gives an overview of the trends in Traffic and Transport Psychology It reflects the considerable development of the most important factors for driving a road vehicle and the variety of international research approaches The first part contains basic approaches and integrated models as well as general theories and their implementation into Traffic and Transport Psychology The second part deals with the driver especially cognition performance social and differential effects and impairment Important aspects are treated such as speed perception

reaction times interaction risk acceptance aggression and gender differences Special chapters refer to performance and fatigue The third part focuses on safety driver support selection and influencing drivers by enforcement training and programs for the rehabilitation of traffic offenders Classic ergonomic methods are discussed as well as modern telematic devices or trends regarding driver assessment In the last part current developments are presented in relation to better mobility and the protection of the environment Questions are asked such as whether we could reduce the use of cars how travel behaviour can be modified or to what extent the use of alternatives to motor vehicles benefits safety as well as the environment This work is not only important for psychologists It should be read by all transport professionals interested in the application of psychology to traffic Traffic and Transport Psychology Talib Rothengatter,Raphael D. Transportation, Traffic Safety and Health — Human Behavior Hans von Holst,Ake Nygren,Ake E. Andersson,2012-12-06 The focus of this book is to present the latest aspects in the area of human behavior and its relation to planning of an optimal traffic safety The contributions from authors in various disciplines such as scientists medical practitioners administrators and practitioners from the car industry examine how road user behavior can cause accidents and how decision makers from various sectors of society may influence road users behavior The development of modern vehicles and new traffic systems requires more sophisticated behavior and technology New medical technologies such as improved neuropsychologic methods and descriptive mapping of behavior with imaging techniques facilitate the understanding of the anatomy and physiology of human behavior The increased knowledge of normal and pathologic behavior contributes to strengthen primary prevention with the goal of reducing traffic accidents *Traffic Psychology* Talib Rothengatter,1997 This special issue is based on papers presented some of the International Conference of Applied Psychology in Madrid in 1994 Over 100 presentations were made at this conference covering almost any conceivable aspect of applying psychology to traffic and transport Obviously within a single special issue it is impossible to provide a comprehensive concise overview of the state of the art within the field Instead a thematic approach is followed focusing on the motivational aspects of risk taking and deviant behavior preceded by a general overview of the main topics in the field It is concluded with a research note about the analysis of the psychological literature on driver behavior Simonet and Wilde discuss risk perception and acceptance and acceptance within the framework of risk homeostasis theory West and Hall discuss individual differences in terms of risk social motivation and attitudes towards traffic law violations Groeger and Chapman address the same issues but in a strictly experimental stance manipulating normative information presented to drivers These papers are a representation of where traffic psychology seems to be heading a realization that driver behavior is determined not only by performance factors i e what he or she is willing to do which are governed by individual cultural and situational variables The literature analysis carried out by Sivak shows that this focus is as yet not apparent in the general literature where alcohol and driver performance still are the dominant topics It is hoped that this special issue will convince psychologists that traffic and transport is a fascinating field of application **Current Literature in Traffic and Transportation** ,1998 **Traffic Safety and Human Behavior** David Shinar,2007-10-05 Describes the basic research procedures used in the area of driving behavior and highway safety ICTTP 2000 ,2000 *Transportation Research* Laurence Hartley,Tim Horberry,2000
