European Trademark Law Tobias Cohen Jehoram, Constant Van Nispen, 2010-09-30 European Trademark Law describes all relevant developments in both legislation and case law in particular of the Court of Justice offering not only a succinct introduction to the theory structure and nature of trademark law but also insightful suggestions for resolving and answering a host of practical problems As the authors note their book provides an overview of trademark law rather than an overview of trademark legislation The authors view the law from different perspectives they take both the European perspective and the perspective from harmonised national trademark law in particular as it is in the Benelux countries Paying particular attention to the implications of the considerable stream of case law that has followed from partially new doctrines set in place by the harmonization process the book greatly clarifies the workings and interrelations of such factors as the following situations that did not constitute infringement under former trademark law but do constitute infringement today and vice versa different types of marks and their particularities registration and opposition procedures relevant international treaties requirements for the mark grounds for refusal and invalidity scope of and limitations to trademark protection use of trademarks in comparative advertising referential use of trademarks use of trademarks on the internet exhaustion of rights parallel trade concepts of well known trademarks and trademarks with a reputation procedural aspects of enforcing trademark rights how trademark rights are lost The analysis also covers specific aspects of the trademark right that are related to other legal areas such as property law trade name law the law regarding geographical indications of origin copyright law competition law and product liability An especially valuable part of the book s presentation follows the life of a trademark from filing the application up to and including its cancellation revocation or invalidity

Global Software Dave Taylor, 2012-12-06 John Sculley In the short history of personal computing the task of the software programmer has been one of the least recognized but one of the most significant in the industry In addition to defining the problems and presenting the solutions the software programmer is confronted with the challenge of having to predict what combination of ideas and technologies will move the industry forward in the most compelling way Even though we've seen the development of tremendous applications in a surprisingly short period of time the most difficult problems often surface when we try to elevate a successful local idea to the international arena In the case of Apple Computer these challenges become especially profound when you consider that Apple sells Macintosh not just in the United States but in Japan China the Middle East Africa Eastern Europe and even to the United Nations itself Of course this means that the personal computer must work everywhere around the world But more significantly it also means that the software must reflect the uniqueness of a given culture its language morals and even its sense of humor To step away from a narrowly defined nationally based paradigm for software development programmers management and entire corporations must learn to recognize what elements of an interface problem solving technique documentation illustration package design and advertisement are local and which elements are appropriate for global markets
