Traffic Engineering With Mpls Networking Technology:

Traffic Engineering with MPLS Eric D. Osborne, Ajay Simha, 2002 Design configure and manage MPLS TE to optimize network performance Almost every busy network backbone has some congested links while others remain underutilized That s because shortest path routing protocols send traffic down the path that is shortest without considering other network parameters such as utilization and traffic demands Using Traffic Engineering TE network operators can redistribute packet flows to attain more uniform distribution across all links Forcing traffic onto specific pathways allows you to get the most out of your existing network capacity while making it easier to deliver consistent service levels to customers at the same time Cisco r Multiprotocol Label Switching MPLS lends efficiency to very large networks and is the most effective way to implement TE MPLS TE routes traffic flows across the network by aligning resources required by a given flow with actual backbone capacity and topology This constraint based routing approach feeds the network route traffic down one or more pathways preventing unexpected congestion and enabling recovery from link or node failures Traffic Engineering with MPLS provides you with information on how to use MPLS TE and associated features to maximize network bandwidth This book focuses on real world applications from design scenarios to feature configurations to tools that can be used in managing and troubleshooting MPLS TE Assuming some familiarity with basic label operations this guide focuses mainly on the operational aspects of MPLS TE how the various pieces work and how to configure and troubleshoot them Additionally this book addresses design and scalability issues along with extensive deployment tips to help you roll out MPLS TE on your own network Understand the background of TE and MPLS and brush up on MPLS forwarding basics Learn about router information distribution and how to bring up MPLS TE tunnels in a network Understand MPLS TE s Constrained Shortest Path First CSPF and mechanisms you can use to influence CSPF s path calculation Use the Resource Reservation Protocol RSVP to implement Label Switched Path setup Use various mechanisms to forward traffic down a tunnel Integrate MPLS into the IP quality of service QoS spectrum of services Utilize Fast Reroute FRR to mitigate packet loss associated with link and node failures Understand Simple Network Management Protocol SNMP based measurement and accounting services that are available for MPLS Evaluate design scenarios for scalable MPLS TE deployments Manage MPLS TE networks by examining common configuration mistakes and utilizing tools for troubleshooting MPLS TE problems Eric and Ajay work in the development group at Cisco that built Traffic Engineering They are among those with the greatest hands on experience with this application This book is the product of their experience George Swallow Cisco Systems Architect for Traffic Engineering Co Chair IETF MPLS Working Group Eric Osborne CCIE r 4122 has been doing Internet engineering of one sort or another since 1995 He joined Cisco in 1998 to work in the Cisco Technical Assistance Center TAC moved from there to the ISP Expert team and then to the MPLS Deployment team He has been involved in MPLS since the Cisco IOS r Software Release 11 1CT days Ajay Simha CCIE 2970 joined the Cisco TAC in 1996 He then went on to support tier 1 and 2 ISPs as part of Cisco s ISP

Expert team Ajay has been working as an MPLS deployment engineer since October 1999 and he has first hand experience in troubleshooting designing and deploying MPLS

NETWORKING 2004: Networking Technologies, Services, and Protocols; Performance of Computer and Communication Networks; Mobile and Wireless Communications Nikolas Mitrou, Kimon Kontovasilis, George Rouskas, Ilias Iliadis, Lazaros Merakos, 2004-04-08 This book contains the refereed proceedings of the 3rd International IFIP TC6 Networking Conference Networking 2004 Conferences in the Networking series span the interests of several distinct but related TC6 working groups including Working Groups 6.2, 6.3 and 6.8 Reflecting this the conference was structured with three Special Tracks i Networking Technologies Services and Protocols ii Performance of Computer and Communication Networks and iii Mobile and Wireless Communications However beyond providing a forum for the presentation of high quality research in various complementary aspects of networking the conference was also targeted to contributing to a unified view of the field and to fostering the interaction and exchange of fruitful ideas between the various related and overlapping specialized subcommunities therein Towards this second objective more than a few conference

sessions and thematic sections in this book cut across the Special Tracks along more generic or fundamental concepts Networking 2004 was fortunate to attract very high interest among the community and the conference received 539 submissions from 44 countries in all five continents These figures correspond to a remarkable increase in submissions from the previous very successful events roughly a 156% increase over Networking 2000 and 71% over Networking 2002 and indicate that Networking conferences are progressively becoming established as worldwide reference events in the field

NETWORKING 2002: Networking Technologies, Services, and Protocols; Performance of Computer and Communication Networks; Mobile and Wireless Communications Enrico Gregori, Marco Conti, Andrew T. Campbell, Guy Omidyar, Moshe Zukerman, 2007-06-30 This book constitutes the refereed proceedings of the Second IFIP TC6 Networking Conference Networking 2002 Networking 2002 was sponsored by the IFIP Working Groups 6.2, 6.3 and 6.8 For this reason the conference was structured into three tracks i Networking Technologies Services and Protocols ii Performance of Computer and Communication Networks and iii Mobile and Wireless Communications This year the conference received 314 submissions coming from 42 countries from all five continents Africa 4 Asia 84 America 63 Europe 158 and Oceania 5 This represents a 50% increase in submissions over the first conference thus indicating that Networking is becoming a reference conference for worldwide researchers in the networking community With so many papers to choose from the job of the Technical Program Committee to provide a conference program of the highest technical excellence was both challenging and time consuming From the 314 submissions we finally selected 82 full papers for presentation during the conference technical sessions To give young researchers and researchers from emerging countries the opportunity to present their work and to receive useful feedback from participants we decided to include two poster sessions during the technical program Thirty one short papers were selected for presentation during the poster sessions The conference technical program was split into three days and included in addition to the 82 refereed contributions 5 invited papers from top level researchers in the networking community
