Assistive Technologies for People with Diverse Abilities Giulio E. Lancioni, Nirbhay N. Singh, 2014-01-07 The familiar image of the disabled tends to emphasize their limitations and reduced quality of life. However, many people with cognitive motor and other difficulties also have the capacity to enhance their social interactions, leisure pursuits, and daily activities with the aid of assistive technology. Assistive devices, from the simple to the sophisticated, have become essential to intervention programs for this population. And not surprisingly, the numbers of devices available are growing steadily. Assistive Technologies for People with Diverse Abilities offers expert analysis of pertinent issues coupled with practical discussion of solutions for effective support. Its comprehensive literature review describes current and emerging devices and presents evidence-based guidelines for matching promising technologies to individuals. Program outcomes are assessed as are their potential impact on the future of the field. In addition, chapters provide detailed descriptions of the personal and social needs of the widest range of individuals with congenital and acquired conditions, including Acquired brain damage, Communication impairment, Attention and learning difficulties with special focus on college students, Visual impairment and blindness, Autism spectrum disorders, Behavioral and occupational disorders, Alzheimer's disease, Severe profound and multiple impairments. The scope and depth of coverage makes Assistive Technologies for People with Diverse Abilities an invaluable resource for researchers, professionals, and graduate students in developmental psychology, rehabilitation medicine, educational technology, occupational therapy, speech pathology, and clinical psychology.

Cook, Janice Miller Polgar, 2008-01-01 It's here: the latest edition of the one text you need to master assistive strategies, make confident clinical decisions, and help improve the quality of life for people with disabilities. Based on the Human Activity Assistive Technology (HAAT) model, Assistive Technologies: Principles and Practice, 4th Edition, provides detailed coverage of the broad range of devices, services, and practices that comprise assistive technology and focuses on the relationship between the human user and the assisted activity within specific contexts. Updated and expanded, this new edition features coverage of new ethical issues, more explicit applications of the HAAT model, and a variety of global issues, highlighting technology applications and service delivery in developing countries. The Human Activity Assistive Technology (HAAT) framework demonstrates assistive technology within common everyday contexts for more relevant application. Focus on clinical application guides you in applying concepts to real-world situations. Review questions and chapter summaries in each chapter help you assess your understanding and identify areas where more study is needed.
