

#### 4.4.1 Normal Start

1. Insert the main power key into the main circuit switch, turn clockwise to switch it on. As shown in Fig 4-46.
2. Put the gear selector (1 in Fig 4-47) in Neutral.
3. Insert the ignition key (2 in Fig 4-47) into the ignition switch, and turn it to position I to electrify the entire system.
4. Turn the key to start position (III) and hold for 3~5 seconds until the engine is started successfully.

#### Note

Do not operate the starting motor for longer than 15 seconds. In case of starting failure, wait 10 seconds between one start attempt and another. After the start failure, if you turn the key switch before the engine stops, the starter will be damaged.

Time period of the key switch staying in the engine start position every time should not exceed 10s. In case the engine fails to start for three successive times, do not start it before finding out the reason and solving the trouble, so as to avoid damaging the engine. In order to protect the battery, 1~2 min interval should be kept between two start operations. After the system is powered on and the text display initializes, make sure that everything goes on smoothly before starting the engine by turning the key switch rightwards.

### NOTICE

When temperature of the engine is low, avoid running at a high speed. Before water temperature of the engine rises to 60°C, do not run by accidental acceleration or at full load. Failure to follow this can cause damage to the machine, personal, and/or property, or cause the equipment to operate improperly.
