

A Tour of the Cell

4

A sampling of the diversity of life on Earth might include a redwood tree, a jellyfish, a bacterium, a tiger, and a mushroom. At one time, living things seemed so varied that the only characteristic they were thought to have in common was a mysterious "vital force" that made them all alive. Then, with the invention of the microscope, biologists discovered cells. By the late nineteenth century, they realized that all living things are made of cells and that an organism is alive because its cells are alive. Even though the life of a redwood tree and that of a jellyfish seem quite different, these two organisms look and function much the same on the cellular level. Now we have electron microscopes, and we can zoom in on the intricate structures within a single cell. We can take cells apart and analyze their chemistry, or probe them with radioactive isotopes, antibodies, lasers, or fluorescent dyes. This chapter describes what these techniques have revealed about the life of a cell.

Criner, Rodger E. Barnette, Gilbert E. D'Alonzo, 2010-06-27 Critical care medicine is a dynamic and exciting arena where complex

pathophysiologic states require extensive knowledge and up to date clinical information. An extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and treatments that are used to optimize care in the critically ill is essential. Since our first edition 7 years ago new information crucial to the care and understanding of the critically ill patient has rapidly accumulated. Because this knowledge base crosses many different disciplines a comprehensive multidisciplinary approach presenting the information is essential similar to the multidisciplinary approach that is used to care for the critically ill patient. We have strived to provide this content in an easily digestible format that uses a variety of teaching tools to facilitate understanding of the presented concepts and to enhance information retention. To meet the demand to provide comprehensive and diverse education in order to understand the pathogenesis and optimum care of a variety of critical illnesses we have substantially revised the prior topics in the first edition with updated information. We have also markedly expanded the number of topics covered to include acute lung injury and the acute respiratory distress syndrome an expanded discussion of the physiology and operation of mechanical ventilation obstetrical care in the ICU neurosurgical emergencies acute coronary syndromes cardiac arrhythmias role of whole body rehabilitation in the ICU ethical conduct of human research in the ICU and nursing care of the ICU patient.
