Toward A New Climate Agreement Conflict Resolution And Governance:

Toward a New Climate Agreement Todd L. Cherry, Jon Hovi, David M. McEvoy, 2014-03-05 Climate change is one of the most pressing problems facing the global community. Although most states agree that climate change is occurring and is at least partly the result of humans' reliance on fossil fuels, managing a changing global climate is a formidable challenge. Underlying this challenge is the fact that states are sovereign, governed by their own laws and regulations. Sovereignty requires that states address global problems such as climate change on a voluntary basis by negotiating international agreements. Despite a consensus on the need for global action, many questions remain concerning how a meaningful international climate agreement can be realized. This book brings together leading experts to speak to such questions and to offer promising ideas for the path toward a new climate agreement. Organized in three main parts, it examines the potential for meaningful climate cooperation. Part 1 explores sources of conflict that lead to barriers to an effective climate agreement. Part 2 investigates how different processes influence states' prospects of resolving their differences and of reaching a climate agreement that is more effective than the current Kyoto Protocol. Finally, part 3 focuses on governance issues, including lessons learned from existing institutional structures. The book is unique in that it brings together the voices of experts from many disciplines such as economics, political science, international law, and natural science. The authors are academics, practitioners, consultants, and advisors. Contributions draw on a variety of methods and include both theoretical and empirical studies. The book should be of interest to scholars and graduate students in the fields of economics, political science, environmental law, natural resources, earth sciences, sustainability, and many others. It is directly relevant for policy makers, stakeholders, and climate change negotiators, offering insights into the role of uncertainty, fairness, policy linkage, burden sharing, and alternative institutional designs.

Research Handbook on Climate Governance Karin Bäckstrand, Eva Lövbrand, 2015-11-27 The 2009 United Nations climate conference in Copenhagen is often represented as a watershed in global climate politics when the diplomatic efforts to negotiate a successor agreement to the Kyoto Protocol failed and was replaced by a fragmented and decentralized climate governance order In the post Copenhagen landscape the top down universal approach to climate governance has gradually given way to a more complex hybrid and dispersed political landscape involving multiple actors arenas and sites The Handbook contains contributions from more than 50 internationally leading scholars and explores the latest trends and theoretical developments of the climate governance scholarship

Sustainability Governance and Hierarchy Philippe Hamman, 2019-06-19 Sustainability Governance and Hierarchy provides a solid theoretically and empirically grounded reflection on the concept of sustainability governance This idea has been growing in popularity in social science literature as well as among decision makers and governance actors as it brings together two vast fields of study that have sometimes been dismissed as vague or ideologically loaded In order to link the concepts of sustainability and governance the book is organized around the exploration of hierarchy issues which often lie in the background of the existing literature but are not the focus of analysis The chapters reflect ongoing controversies and dialogue between scientists with different theoretical and thematic backgrounds who are all willing to participate in and contribute to a constructive effort to reach a more inclusive and more theoretically relevant stage for sustainability studies being content with merely global analyses The book is an innovative contribution to the hierarchy non hierarchy debate regarding governance arrangements in the field of sustainability and sustainability studies This book will be of interest to advanced students and scholars focusing on governance issues sustainability studies environmental studies as well as on the methodological aspects of the social sciences economy geography law philosophy political science sociology urbanism and planning This book is published with the support of the European Union the European Regional Development Fund ERDF and the Upper Rhine Interreg V programme as part of the Upper Rhine Cluster for Sustainability Research project

The New Power Politics of Global Climate Governance Maximilian Terhalle, Charlotte Streck, 2018-04-19 This book is based on the assumption that great powers determine global politics and in this instance environmental politics It addresses the approaches of both established and rising powers and their implications for the advancement of international climate negotiations The new introduction looks at the key developments in this realm since 2013 examining the bilateral deals

between China and the United States and the results of the UNFCCC's 21st Convention of the Parties COP convening at Paris in 2015. Two key features link the contributions of this volume: their underlying assumption that major powers are the central actors in determining global environmental politics and their assessment of and implications of the approaches both of rising and established major powers for global climate norms. One key argument of this volume is that today's geopolitics are about who gets how much in the fiercely competitive race over the available carbon space. The book concludes that prudently balancing power in the new century requires a fair sharing of burden among the existing and emerging powers. In light of such burden sharing, pluralistic domestic politics as well as diverging normative beliefs and worldviews require consideration of different conditions even if historical legacies of the industrialised world have increasingly been put into question as a political argument by the United States. This book is based on a special issue of the journal *Climate Policy*. **Beyond**

Treaties: Rethinking Legal Mechanisms for International Climate Governance Türkan Gülce Budak, 2025-04-05. This open access book examines the implications of the shift towards minilateralism for international climate law, analysing how climate-related trade measures and Paris Agreement-compatible platforms may enhance global climate governance. The landscape of international climate change law is evolving from a traditional consensus-based treaty model characterized by comprehensive yet often slow-moving agreements toward a more pragmatic approach known as minilateralism. In this emerging paradigm, smaller groups of countries negotiate and implement trade measures aimed at mitigating climate impacts. An exemplary case is the European Green Deal, which introduces climate-related trade measures as a key instrument for achieving sustainability goals within and beyond Europe. Additionally, countries are exploring minilateral cooperation platforms within the Paris Agreement framework to further their climate objectives. The central questions to be addressed in this book are twofold: First, how can the design of the minilateral schemes comply with the Paris Agreement's international cooperation common but differentiated responsibilities and respective capacities and market-based mechanisms principles? Second, to what extent do the climate-related trade measures conform with the WTO regime, particularly with the non-discrimination principles of the trade law, namely most-favoured-nation and national treatment? **Formal Modeling in**

Social Science Carol Mereshon, Olga Shvetsova, 2019-09-03. A formal model in the social sciences builds explanations when it structures the reasoning underlying a theoretical argument; opens venues for controlled experimentation; and can lead to hypotheses. Yet more importantly, models evaluate theory, build theory, and enhance conjectures. *Formal Modeling in Social Science* addresses the varied helpful roles of formal models and goes further to take up more fundamental considerations of epistemology and methodology. The authors integrate the exposition of the epistemology and the methodology of modeling and argue that these two reinforce each other. They illustrate the process of designing an original model suited to the puzzle at hand using multiple methods in diverse substantive areas of inquiry. The authors also emphasize the crucial though underappreciated role of a narrative in the progression from theory to model. Transparency of assumptions and steps in a

model means that any analyst will reach equivalent predictions whenever she replicates the argument Hence models enable theoretical replication essential in the accumulation of knowledge Formal Modeling in Social Science speaks to scholars in different career stages and disciplines and with varying expertise in modeling *Emissions Trading Schemes under International Economic Law* James Munro, 2018-08-09 The announcement by China that it will implement a national emissions trading scheme confirms the status of this instrument as the pre eminent policy choice for mitigating climate change China will join the dozens of existing and emerging schemes around the world from the EU to California South Korea to New Zealand that use carbon units otherwise known as emissions permits or carbon credits to trade in greenhouse gas emissions in a multi billion dollar global carbon market However to date there has been no consensus about this pre eminent policy instrument being regulated by international economic law through the World Trade Organization international investment agreements and free trade agreements Munro addresses this issue by evaluating whether carbon units qualify as goods services financial services and investments under international economic law and showing how international economic law applies to emissions trading scheme in diverse and unexpected ways Further by engaging in a comparative assessment of schemes around the world his book illustrates how and why all emissions trading schemes engage in various forms of violations of international economic law which would not in most instances be justified by environmental or other exceptions In doing so he demonstrates how such schemes can be designed or reformed in ways to ensure their future compliance

Linking the European Union Emissions Trading System Charlotte Unger, 2021-01-25 This book focuses on the linking of the European Union Emissions Trading System EU ETS with other independent regional ETS While rich practical and academic research has evolved on the economic and technical side of ETS linking political drivers and barriers have so far been underrepresented in this debate Filling this lacuna and based on international relations theory existing research and qualitative fieldwork this book introduces the range of political conditions that influence linking such as political leadership and stakeholder activity Specifically it analyzes which of these aspects have played a role in three different linking activities of the EU 1 a failed linking attempt EU ETS California Cap and Trade Program 2 a successful linking treaty EU ETS Switzerland Emissions Trading System and 3 an agreed upon but not realized link EU ETS Australia Carbon Pricing Mechanism Through an interrogation of these examples Dr Unger concludes that it is not only the technical challenges or the overall economic benefit but rather domestic interests structural aspects and external international political developments that have jointly dominated linking activities especially those in which the EU takes part This book will be of great interest to scholars and policy makers working in climate policy and EU environmental politics **Governing Climate Change**

Andrew Jordan, Dave Huitema, Harro van Asselt, Johanna Forster, 2018-05-03 Climate change governance is in a state of enormous flux New and more dynamic forms of governing are appearing around the international climate regime centred on the United Nations Framework Convention on Climate Change UNFCCC They appear to be emerging spontaneously from the

bottom up producing a more dispersed pattern of governing which Nobel Laureate Elinor Ostrom famously described as polycentric This book brings together contributions from some of the world's foremost experts to provide the first systematic test of the ability of polycentric thinking to explain and enhance societal attempts to govern climate change It is ideal for researchers in public policy international relations environmental science environmental management politics law and public administration It will also be useful on advanced courses in climate policy and governance and for practitioners seeking incisive summaries of developments in particular sub areas and sectors This title is also available as Open Access on Cambridge Core

Research Handbook on International Law and Peace Cecilia M. Bailliet,2019 Peace is an elusive concept especially within the field of international law varying according to historical era and between contextual applications within different cultures institutions societies and academic traditions This Research Handbook responds to the gap created by the neglect of peace in international law scholarship Explaining the normative evolution of peace from the principles of peaceful co existence to the UN declaration on the right to peace this Research Handbook calls for the fortification of international institutions to facilitate the pursuit of sustainable peace as a public good

Climate Change Finance and International Law Alexander Zahar,2016-12-01 Since 2010 a significant quantity of international climate change finance has begun to reach developing countries However the transfer of finance under the international climate change regime the legal and ethical obligations that underpin it the constraints on its use its intended outcomes and its successes failures and future potential constitutes a poorly understood topic Climate Change Finance and International Law

fills this gap in the legal scholarship The book analyses the legal obligations of developed countries to financially support qualifying developing countries to pursue globally significant mitigation and adaptation outcomes as well as the obligations of the latter under the international regime of financial support Through case studies of climate finance mechanisms and a multitude of other sources this book delivers a rich legal and empirical understanding of the implementation of states climate finance obligations to date The book will be of interest to scholars and students of international law and policy international relations and the maturing field of climate change law *Architectures of Earth System Governance* Frank

Biermann, Rakhyun E. Kim, 2020-05-07 International institutions are prevalent in world politics More than a thousand multilateral treaties are in place just to protect the environment alone and there are many more And yet it is also clear that these institutions do not operate in a void but are enmeshed in larger highly complex webs of governance arrangements This compelling book conceptualises these broader structures as the architectures of global governance Here over 40

international relations scholars offer an authoritative synthesis of a decade of research on global governance architectures with an empirical focus on protecting the environment and vital earth systems They investigate the structural intricacies of earth system governance and explain how global architectures enable or hinder individual institutions and their overall effectiveness The book offers much needed conceptual clarity about key building blocks and structures of complex governance architectures charts detailed directions for new research and provides analytical groundwork for policy reform This is one of a series of publications associated with the Earth System Governance Project For more publications see www.cambridge.org/earth-system-governance **The Oxford Handbook of International Climate Change Law** Cinnamon P.

Carlarne, Kevin R. Gray, Richard Tarasofsky, 2016-05-12 Climate change presents one of the greatest challenges of our time and has become one of the defining issues of the twenty first century The radical changes which both developed and developing countries will need to make in economic and in legal terms to respond to climate change are unprecedented International law including treaty regimes institutions and customary international law needs to address the myriad challenges and consequences of climate change including variations in the weather patterns sea level rise and the resulting migration of peoples The Oxford Handbook of International Climate Change Law provides an unprecedented and authoritative overview of all aspects of international climate change law as it currently stands with guidance for how it should develop in the future Over forty leading scholars and practitioners set out a comprehensive understanding of the legal issues that surround this vitally important but still emerging area of international law This book addresses the major legal dimensions of the problems caused by climate change not only in the content and nature of the international legal frameworks which need implementation at the national level but also the development of carbon trading systems as a means of reducing the costs of meeting emission reduction targets After an introduction to the field the Handbook assesses the relevant institutions the key applicable principles of international law the international mitigation regime and its

consequences and climate change litigation before providing perspectives focused upon specific countries or regions The Handbook will be an invaluable resource for scholars students and practitioners of international climate change law It provides readers with diverse perspectives bringing together interpretations from different disciplines countries and cultures

An Introduction to Climate Change Economics and Policy Felix R. FitzRoy, Elissaios Papyrakis, 2016-04-14 The 2nd edition of *An Introduction to Climate Change Economics and Policy* explains the key scientific economic and policy issues related to climate change in a completely up to date introduction for anyone interested and students at all levels in various related courses including environmental economics international development geography politics and international relations FitzRoy and Papyrakis highlight how economists and policymakers often misunderstand the science of climate change underestimate the growing threat to future civilization and survival and exaggerate the costs of radical measures needed to stabilize the climate In contrast they show how direct and indirect costs of fossil fuels particularly the huge health costs of local pollution actually exceed the investment needed for transition to an almost zero carbon economy in two or three decades using available technology

Research Handbook on Climate Change Mitigation Law Geert Van Calster, Wim Vandenberghe, Leonie Reins, 2015-01-30 As well as taking stock of the current and proposed legal instruments the book looks at the wider policy and economic aspects of coping with climate change It provides a comparative overview of key issues across Europe the United States Asia Pacific

Diversification and Cooperation in a Decarbonizing World Grzegorz Peszko, Dominique van der Mensbrugghe, Alexander Golub, John Ward, Dimitri Zenghelis, Cor Marijs, Anne Schopp, John Rogers, Amelia Midgley, 2020-07-28 This book is the first stocktaking of what the decarbonization of the world economy means for fossil fuel dependent countries These countries are the most exposed to the impacts of global climate policies and at the same time are often unprepared to manage them They depend on the export of oil gas or coal the use of carbon intensive infrastructure for example refineries petrochemicals and coal power plants or both Fossil fuel dependent countries face financial fiscal and macro structural risks from the transition of the global economy away from carbon intensive fuels and the value chains based on them This book focuses on managing these transition risks and harnessing related opportunities

Diversification and Cooperation in a Decarbonizing World identifies multiple strategies that fossil fuel dependent countries can pursue to navigate the turbulent waters of a low carbon transition The policy and investment choices to be made in the next decade will determine these countries degree of exposure and overall resilience Abandoning their comfort zones and developing completely new skills and capabilities in a time frame consistent with the Paris Agreement on climate change is a daunting challenge and requires long term revenue visibility and consistent policy leadership This book proposes a constructive framework for climate strategies for fossil fuel dependent countries based on new approaches to diversification and international climate cooperation Climate policy leaders share responsibility for creating room for all countries to contribute to the goals of the Paris Agreement taking into account the specific vulnerabilities and opportunities

each country faces The Environment and International Relations Kate O'Neill, 2017-02-06 The new edition of this exciting textbook introduces students to the ways in which the theories and tools of international relations and other social science disciplines can be used to analyse and address global environmental problems Kate O'Neill develops an innovative historical and analytical framework for understanding global environmental issues integrating insights from different disciplines and she identifies the main actors and their roles thereby encouraging readers to engage with the issues and equip themselves with the knowledge they need to apply their own critical insights Revised and updated the new edition features new figures examples textboxes and a new chapter on the emergence and politics of market mechanisms as a new mode of global environmental governance The latest developments in the field including the December 2015 Paris Climate Agreement along with new perspectives and recent thinking are incorporated throughout This will be invaluable for students of environmental issues both from political science and environmental studies perspectives *Promoting Peace Through International Law* Cecilia Marcela Bailliet, Kjetil Mujezinovic Larsen, 2015-01-29 Within international law there is no unified concept of peace This book addresses this gap by considering the liberal conception of peace within Western philosophy alongside the principle of peaceful coexistence supported in the East By tracing the evolution of the international law of peace through its historical and philosophical origins this book investigates whether there is a right to peace The book explores how existing international law and institutions contribute to the establishment of peace or how they fail to do so It sets out how international law promotes the negative dimension of peace the absence of violence as well as its positive dimension the presence of underlying conditions for peace It also investigates whether international actors and institutions have particular obligations in relation to the establishment and maintenance of peace Discussions include the relationships between the different regimes of human rights trade development the environment and regulation of arms trade with peace the role of women refugees and other groups seeking equal treatment the role of peacekeepers transitional justice mechanisms international courts fact finding missions and national constitutional frameworks in upholding peace in practice and how civil society participates in the promotion and safeguarding of peace The book's comprehensive treatment of the concept of peace in international law makes it an ideal reference work for those working in the field as well as for students
