Toxic Town IBM Pollution And Industrial Risks:

Toxic Town Peter C. Little, 2014-03-14 Shows the risks of high tech pollution through a study of an IBM plant's effects on a New York town. In 1924 IBM built its first plant in Endicott, New York. Now Endicott is a contested toxic waste site. With its landscape thoroughly contaminated by carcinogens, Endicott is the subject of one of the nation's largest corporate state mitigation efforts. Yet despite the efforts of IBM and the U.S. government, Endicott residents remain skeptical that the mitigation systems employed were designed with their best interests at heart. In *Toxic Town*, Peter C. Little tracks and critically diagnoses the experiences of Endicott residents as they learn to live with high tech pollution, community transformation, scientific expertise, corporate state power, and risk mitigation technologies. By weaving together the insights of anthropology, political ecology, disaster studies, and science and technology studies, the book explores questions of theoretical and practical import for understanding the politics of risk and the ironies of technological disaster response in a time when IBM's stated mission is to build a Smarter Planet. Little critically reflects on IBM's new corporate tagline, arguing for a political ecology of corporate social and environmental responsibility and accountability that places the social and environmental politics of risk mitigation front and center. Ultimately, Little argues that we will need much more than hollow corporate taglines, claims of corporate responsibility, and attempts to mitigate high tech disasters to truly build a smarter planet.

Electronic Waste Josh Lepawsky, 2025-02-06 The United Nations has reported that the world is on track to produce over 180 billion pounds of electronic waste (e-waste) by 2030. This tidal wave of discarded electronic products, including cellular phones, laptops, and desktop computers, televisions, solar panels, major household appliances, and telecommunications

equipment poses a host of serious environmental and public health problems and challenges Electronic Waste A Reference Handbook provides readers with an illuminating survey of the myriad issues and controversies surrounding the collection treatment disposal and recycling of electric and electronic products including trends and challenges related to public health social justice and environmental protection and stewardship It also discusses ways in which increasingly electronics dependent societies and economies are factoring environmental social and public health considerations into their e waste mitigation recycling and disposal strategies The book is further supplemented with perspectives from experts in the field of electronic waste profiles of important organizations and agencies and a chronology of major events and developments

Burning Matters Peter C. Little, 2022 Global trade in electronic waste e waste has led to various waste management challenges and many regions of the Global South have suffered the toxic consequences In Burning Matters Peter C Little explores the complex cultural economic and environmental health politics of e waste work in Ghana He brings to light the lived experiences of Ghana s e waste workers as they navigate the health social and economic challenges of highly toxic e waste labor In particular Little engages the experiences of e waste workers who burn bundles of electrical cables to extract copper a practice that contaminates bodies and the urban environment and which has attracted international organizations seeking to mitigate risk and find quick tech solutions to this highly toxic e waste work A nuanced perspective on e waste burning and environmental politics in Africa at a time when global e waste generation and trade is at an all time high Burning Matters contends that e waste interventions devoid of ethnographic perspective and knowledge risk downplaying the vibrant complexities of e waste itself and the matters of social life and labor that matter most to Ghana s e waste workers

phosphorous mining and fertilizer production lead and zinc mining and electronic waste processing The book also includes extended summaries of the in depth research carried out by Ajiang Chen and his team in some of China s cancer villages village sized clusters of high cancer incidence These cases make clear the staggering human costs of development and the deeply uneven distribution of costs and benefits that underlie China s economic power *Critical Zones of Technopower and Global Political Ecology* Peter C.
