Tri-Carb® 2100TR Liquid Scintillation Counter

Description

The Tri-Carb® 2100TR liquid scintillation counter is computer-controlled, benchtop liquid scintillation analyzer for detecting small amounts of alpha, beta and gamma radioactivity.

Standard Instrument Features

- Patented TR-LSC® (Time-Resolved Liquid Scintillation Counting) using unique afterpulse rejection technology is featured for high sensitivity, low background counting of LS samples. TR-LSC increases sample throughput and reduces cocktail consumption.
- Built-in IBM® compatible, Pentium® class single board computer features 4 MB RAM; 3.5 inch, 1.44 MB floppy disk; video graphics adapter card; high resolution color SVGA CRT display; clock/calendar with battery support; serial communications and parallel printer port; and IBM® PC DOS 2.00 or higher operating system.
- A cassette-loaded, bidirectional conveyor mechanism is standard with fully accessible sample capacity of either 400 standard 20 mL vials or 720 small 4 or 7 mL vials, depending upon configuration purchased.
- High resolution linear Spectralyser™ memory, calibrated in keV has three measuring regions with preset and user adjustable settings. The high resolution multichannel analyzer accumulates all sample counting information. Spectra can be interpolated to the nearest 1/10 keV over an energy range of 0-2,000 keV.
- SNC (Self-Normalization and Calibration) recalibrates the Spectralyser and quench-indicating parameters via a "C" sealed reference for absolute activity calculations via the Direct DPM technique.
- IQA™ (Instrument Performance Assessment) database stores the results for each of eight IQA parameters into a built-in database for instant recall as tables, and as time vs. performance charts. IQA data may also be transmitted through RS-232 for storage. IQA shows trends of IQA parameters to identify impending problems.

- Multitasking operating environment with color SVGA CRT monitor is mounted on a maneuverable support arm, and full alphanumeric keyboard installed in a pull-out drawer. System simultaneously retrieves, analyzes data, counts, reports, plots, changes samples, and performs display functions.
- Multi-user sample processing for 15 users, includes automatic recall and summary printout of counting conditions and data reduction routines by Quick-Count protocol inserts (30 or 60 protocol options are available).
- Direct DPM (Disintegrations Per Minute) for single label pure beta or beta/gamma nuclides provides single key DPM for the full range of beta nuclides, even heavily quenched TL. Does not require the user to store quench curves, and different nuclides may be counted in the same cassette.

Transforming Growth Factor-Beta Protocols Philip H. Howe, 2008-02-05 Philip H Howe and a group of well versed experimentalists present the first major volume a collection of indispensable classic and cutting edge TGF assays Described in great detail to ensure robust and successful results these readily reproducible techniques range from the growth inhibition assay for TGF to methods for monitoring its interactions with the mediating proteins Extensive notes discuss potential pitfalls and provide tips on how to avoid failures and throughout emphasis is given to detailing those technical steps critical for experimental success that are often omitted in the primary literature Concise and highly practical Transforming Growth Factor Beta Protocols provides today's molecular and cell biologists both expert and novice with time tested methods for the identification and analysis of the signal transduction pathways by which TGF induces and modulates physiological behavior
