Nicholls, 1991-07-31 The approach described in JonSl JonS3a JonS3b set out to extend operation decom position methods for sequential programs such as are used in VDM Jon90 to cover concurrent shared variable systems The essential step in JonSl was to recognise that 1 inter erence had to be specified This is necessary in order to achieve a notion of compo

sitionality contrast Ow75 Rather than the many erudite definitions of compositionality e.g. ZwiSS the view taken here is that when a development task is decomposed into sub tasks these must be simpler than the original task This is easy to achieve for sequential programs decomposing a specified operation S into $S_1 S_2$ the specifications of the S_j should neither include unnecessary information from each other nor from the context i.e. S An interesting discussion of the Quest for Compositionality in the context of concurrency is contained in dRS5 dRS6 The rely guarantee idea provided an existence proof that specifications and developments could be made powerful enough to cope with some forms of interference The work initially attracted little attention but 2 3 there have recently been some critiques and attempts to extend the work Most notably Ketil St len s thesis St 90 addresses the main shortcomings of JonSl the fact that no attempt had been made to handle synchronization has been remedied by adding a wait condition and other limitations of expressiveness have been shown to succumb to the judicious use of auxiliary variables
