

#### LOCATION SYSTEM

**DISCUSSION**—The spin-coated films should be considered away from failure at operation, because the polymer degradation. The present study and the previous researches<sup>1,2</sup> show that there should be no loss of  $\text{Cu}^{2+}$  to  $\text{Cu}^0$ . Hence this suggests by forming the outside electrode, better bond metal electrode.

Local leveling of sports plays is one of the current sports play problems. This does not mean the sports play is defective but indicates the play needs more frequent cleaning and possibly adjustment.

For heavy loads use Axminster A/T, A1, A2 or Champness J-6. For light and medium loads use low grade fuel, all loads use Axminster A-1, A2 A3 or Champness J-1. Intersecting pipes are charcut lived and shown per drawings and standards.

Sparks plug gap should be set properly. 1990  
has made with correct assembly on heavy loads  
and loss of power.

(Osteone removal will result in bending, pore volume and surface area will also be affected).

The spark plugs and valves should be maintained in good condition and free of dirt and oil.

**DISCUSSION:** To find the distribution, grade engine until No. 1 piston is approaching top center on its compression stroke and then center shaft appears in center of inspection window on bottom of clock housing.

The compressive stroke of No. 1 piston can be determined by removing the spark plug and placing thumb in spark plug hole. Compression slowly build up in forward past thumb. The compression in No. 2 will be very low due the imperfect opening of this time. Valve still closed. Observe the "V" or advance mark.

Remove stress and heat cap. Turn valve to position as shown (forward primary lead terminal). Place in operating location with primary lead terminal to rear, rotate dial-plate in opposite direction of valve rotation to shoulder clockwise until locked.

Jeff Lewis, *Remorse runs, replace door chime, ringer and distributor cap. Place No. 1 spark plug wire directly above cover. Frayed around distributor aluminum No. 1, 2 and 3. Place coil wire in center. Run checking timing with timing light the spark will occur when five o'clock is in center of inspection opening when engine is above 1000 r.p.m.*

**Point Gap:** The point gap should be .001" and is set by turning engine until the transfer points are in their widest position or even in an highest side of case. If not .001" (pointing with feeler gauge) loosen the two screws in the fixed point and turn case until this gap is obtained. After tightening screws, check point gap.

## ELECTRICAL SYSTEMS

**ADDITIONAL:** The asterisk indicates the charging or discharging rate of battery. If necessary, always disconnect the battery cable, to prevent the discharge of battery, until the difficulty is located and corrected. Such a condition is usually caused by a worn or frozen wire making a short circuit or by an actual short circuit being caused by the battery.

If a statement fails to show a changing rate use all the following rules in the same order:

- Losses are correlated with connections.
- Broken wires.
- Faulty insulation.
- Only at ground potential because of insulation.
- With constant losses.

Fluorescent and brushes can be cleaned with  
excess "H" solvent. Use hot water when  
possible.

**LIGHT SWITCH & COULSLATION CONTROL.** - The generator has two changing rates. These are controlled by the field switch.

When the light switch is pushed all the way up, the lights are off and the charging rate is about 5 amperes. When the switch is pulled out to first touch the lights are on and the charging rate remains about 5 amperes. When the light switch is pulled all the way out the lights are off and the charging rate is increased to about 10 to 12 amperes. The light rate of charge should only be used when the battery is in a partially discharged condition. In most tractor operations the level will be in a maintenance or full battery.

**FLUX** - The light flux is provided with a 20 degree lens. This lens is located on the inside of the instrument box.

**LIGHTS** - The head lights are adjustable in or out and may be adjusted up or down, by loosening the retaining thumb screw and rotating the lights in the desired position.
