**Construction Manual for Polymers + Membranes** Jan Knippers, Jan Cremers, Markus  
 Gabler, Julian Lienhard, 2012-12-17 Whether it be as translucent sheets broadly stretched membranes and inflated foil  
 cushions or in graceful organic curves architecture today is utilizing plastics in the most disparate forms and for a wide  
 variety of purposes Innovative technical developments are constantly improving its material properties at the same time  
 there is a growing new awareness of its potential as a construction material While plastics used to be employed primarily as  
 an inexpensive variant on traditional building materials they are increasingly regarded in the construction world today as a  
 serious and viable alternative be it as supporting structures roofs facades or elements of interior design and decoration  
 Thanks in large part to this inherent self sufficiency plastics are currently enjoying an unprecedented surge in popularity  
 even among the international architectural avant garde as multiwall sheets or corrugated fiber reinforced panels or as filling  
 between glass panes And the new generation of ecological bioplastics also pays tribute to the debate on sustainability ridding  
 plastics of their lingering reputation as environmental offenders From the history of plastics and membranes in architecture  
 to their material properties and requirements in construction and design the Plastics and Membranes Construction Manual  
 cuts to the chase providing the kind of solid and comprehensive overview of the subject that readers have come to expect  
 from the Im DETAIL series Selected project examples round off the reference work and make it indispensable for the day to  
 day life of the professional planner and for every architecture library
