

Figure 1-1 -OS030EB Truck

MODEL DESCRIPTION

The Yale OS 030 EB electric lift truck has a 3,000 lb. lifting capacity and is specially designed for order picking. The power source is a 24 volt battery. The operator's platform is elevated with the load. This allows accurate fork positioning and order picking operations. The lift truck can be operated from the standing position with the operator facing either direction.

NOTE: Throughout this manual the terms left, right, front and rear relate to the viewpoint of an operator standing in the truck facing the steer/drive tire.

The control handle allows the use of one hand to control forward and reverse travel as well as lift and lower. The variable lift/lower control allows the operator the option of varying the lift and lower speeds. The drive motor is stationary to prevent flexing and wear of the power cables. An electrically released, spring applied brake is also provided. Yale Hi-Vis Triplex masts provide excellent visibility for these models.

Before attempting to operate this lift truck, carefully read and understand these operating procedures. Make sure the lift truck is in proper operating condition. Be sure all safety devices such as the overhead guard and the tether line and belt are in place and properly secured. The operator should always wear the tether line and belt when operating this unit.

No additions, omissions, changes, or modifications should be made that will affect compliance to the stated requirements or in any way minimize the effectiveness of the safety devices.
